RE: SCAG Comments on the Draft Environmental Impact Report (DEIR) for the City of Calabasas 2021-2029 Housing Element Update [SCAG NO. IGR10452]

Dear Mr. Klein,

Thank you for submitting the Notice of Availability of the Draft Environmental Impact Report (DEIR) for the City of Calabasas 2021-2029 Housing Element Update (“proposed project”) to the Southern California Association of Governments (SCAG) for review and comment. The proposed project includes a Housing Element Update and associated updates to the Land Use, Safety, and Circulation Elements of the General Plan.

Based on SCAG staff’s review, the proposed project generally supports overall the goals of the 2020 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS or Connect SoCal). SCAG staff comments are detailed in the attachment to this letter.

When available, please send the Final Environmental Impact Report to IGR@scag.ca.gov. If you have any questions regarding the attached comments, please contact the Intergovernmental Review (IGR) Program, attn.: Anita Au, Senior Regional Planner, at (213) 236-1874 or IGR@scag.ca.gov. Thank you.

Sincerely,

Frank Wen, Ph.D.
Manager, Planning Strategy Department

**COMMENTS ON THE NOTICE OF AVAILABILITY OF A
DRAFT ENVIRONMENTAL IMPACT REPORT FOR
CITY OF CALABASAS 2021-2029 HOUSING ELEMENT UPDATE [SCAG NO. IGR10452]**

SUMMARY

Pursuant to Senate Bill (SB) 375, SCAG is the designated Regional Transportation Planning Agency under state law and is responsible for preparation of the Regional Transportation Plan (RTP) including the Sustainable Communities Strategy (SCS). SCAG’s feedback is intended to assist local jurisdictions and project proponents to implement projects that have the potential to contribute to attainment of Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) goals and align with RTP/SCS policies.

Based on SCAG staff review, the proposed project generally supports the applicable goals of the 2020 Connect SoCal, and the analysis in the Draft EIR is based on the growth forecasts adopted as part of the 2020 Connect SoCal.

CONNECT SOCIAL GOALS

The SCAG Regional Council fully adopted [Connect SoCal](#) in September 2020. Connect SoCal, also known as the 2020 – 2045 RTP/SCS, builds upon and expands land use and transportation strategies established over several planning cycles to increase mobility options and achieve a more sustainable growth pattern. The long-range visioning plan balances future mobility and housing needs with goals for the environment, the regional economy, social equity and environmental justice, and public health. The goals included in Connect SoCal may be pertinent to the proposed project. These goals are meant to provide guidance for considering the proposed project. Among the relevant goals of Connect SoCal are the following:

SCAG CONNECT SOCIAL GOALS	
Goal #1:	<i>Encourage regional economic prosperity and global competitiveness</i>
Goal #2:	<i>Improve mobility, accessibility, reliability and travel safety for people and goods</i>
Goal #3:	<i>Enhance the preservation, security, and resilience of the regional transportation system</i>
Goal #4:	<i>Increase person and goods movement and travel choices within the transportation system</i>
Goal #5:	<i>Reduce greenhouse gas emissions and improve air quality</i>
Goal #6:	<i>Support healthy and equitable communities</i>
Goal #7:	<i>Adapt to a changing climate and support an integrated regional development pattern and transportation network</i>
Goal #8:	<i>Leverage new transportation technologies and data-driven solutions that result in more efficient travel</i>
Goal #9:	<i>Encourage development of diverse housing types in areas that are supported by multiple transportation options</i>
Goal #10:	<i>Promote conservation of natural and agricultural lands and restoration of habitats</i>

Connect SoCal Strategies

To achieve the goals of Connect SoCal, a wide range of land use and transportation strategies are included in the accompanying twenty (20) technical reports. To view Connect SoCal and the accompanying technical reports, please visit the [Connect SoCal webpage](#). Connect SoCal builds upon the progress from previous RTP/SCS cycles and continues to focus on integrated, coordinated, and balanced planning for land use and transportation that helps the SCAG region strive towards a more sustainable region, while meeting statutory requirements pertinent to RTP/SCSs. These strategies within the regional context are provided as guidance for lead agencies such as local jurisdictions when the proposed project is under consideration.

SCAG Staff Comments

Table 4.6-3 General Plan Update Consistency with Applicable SCAG 2020-2045 RTP/SCS Strategies indicates that the project goals are aligned with 2020 Connect SoCal goals and strategies.

DEMOGRAPHICS AND GROWTH FORECASTS

A key, formative step in projecting future population, households, and employment through 2045 for Connect SoCal was the generation of a forecast of regional and county level growth in collaboration with expert demographers and economists on Southern California. From there, jurisdictional level forecasts were ground-truthed by subregions and local agencies, which helped SCAG identify opportunities and barriers to future development. This forecast helps the region understand, in a very general sense, where we are expected to grow, and allows SCAG to focus attention on areas that are experiencing change and may have increased transportation needs. After a year-long engagement effort with all 197 jurisdictions one-on-one, 82 percent of SCAG’s 197 jurisdictions provided feedback on the forecast of future growth for Connect SoCal. SCAG also sought feedback on potential sustainable growth strategies from a broad range of stakeholder groups – including local jurisdictions, county transportation commissions, other partner agencies, industry groups, community-based organizations, and the general public. Connect SoCal utilizes a bottom-up approach in that total projected growth for each jurisdiction reflects feedback received from jurisdiction staff, including city managers, community development/planning directors, and local staff. Growth at the neighborhood level (i.e., transportation analysis zone (TAZ) reflects entitled projects and adheres to current general and specific plan maximum densities as conveyed by jurisdictions (except in cases where entitled projects and development agreements exceed these capacities as calculated by SCAG). Neighborhood level growth projections also feature strategies that help to reduce greenhouse gas emissions (GHG) from automobiles and light trucks to achieve Southern California’s GHG reduction target, approved by the California Air Resources Board (CARB) in accordance with state planning law. Connect SoCal’s Forecasted Development Pattern is utilized for long range modeling purposes and does not supersede actions taken by elected bodies on future development, including entitlements and development agreements. SCAG does not have the authority to implement the plan -- neither through decisions about what type of development is built where, nor what transportation projects are ultimately built, as Connect SoCal is adopted at the jurisdictional level. Achieving a sustained regional outcome depends upon informed and intentional local action. To access jurisdictional level growth estimates and forecasts for years 2016 and 2045, please refer to the [Connect SoCal Demographics and Growth Forecast Technical Report](#). The growth forecasts for the region and applicable jurisdictions are below.

	Adopted SCAG Region Wide Forecasts				Adopted City of Calabasas Forecasts			
	Year 2020	Year 2030	Year 2035	Year 2045	Year 2020	Year 2030	Year 2035	Year 2045
Population	19,517,731	20,821,171	21,443,006	22,503,899	24,463	24,744	24,907	24,939
Households	6,333,458	6,902,821	7,170,110	7,633,451	9,008	9,184	9,272	9,288
Employment	8,695,427	9,303,627	9,566,384	10,048,822	20,556	20,656	20,705	20,798

SCAG Staff Comments

Section 4.11 Population and Housing indicates that the Draft EIR population, housing, and employment trends and forecasts were based on the most recently adopted SCAG 2020 Connect SoCal Regional Growth Forecasts.

MITIGATION

SCAG Staff Comments

SCAG staff recommends that you review the [Final Program Environmental Impact Report \(Final PEIR\)](#) for Connect SoCal for guidance, as appropriate. SCAG's Regional Council certified the PEIR and adopted the associated Findings of Fact and a Statement of Overriding Considerations (FOF/SOC) and Mitigation Monitoring and Reporting Program (MMRP) on May 7, 2020 and also adopted a PEIR Addendum and amended the MMRP on September 3, 2020 (please see the [PEIR webpage](#) and scroll to the bottom of the page for the PEIR Addendum). The PEIR includes a list of project-level performance standards-based mitigation measures that may be considered for adoption and implementation by lead, responsible, or trustee agencies in the region, as applicable and feasible. Project-level mitigation measures are within responsibility, authority, and/or jurisdiction of project-implementing agency or other public agency serving as lead agency under CEQA in subsequent project- and site- specific design, CEQA review, and decision-making processes, to meet the performance standards for each of the CEQA resource categories.

REGIONAL HOUSING NEEDS ALLOCATION

On March 4, 2021 SCAG's Regional Council adopted the [6th cycle Final Regional Housing Needs Assessment \(RHNA\) Allocation Plan](#) which covers the planning period October 2021 through October 2029. The 6th cycle Final RHNA allocation for the applicable jurisdiction is below.

SCAG 6 th Cycle Final RHNA Allocation for City of Calabasas	
Income Category	RHNA Allocation (Units)
Very low income	132
Low income	71
Moderate income	70
Above moderate income	81
Total RHNA Allocation	354

Sixth cycle housing elements are due to the California Department of Housing and Community Development (HCD) by October 15, 2021. SCAG encourages jurisdictions to prepare the draft housing element in advance of the due date to ensure adequate time to address HCD comments and adopt a final housing element. Jurisdictions that do not have a compliant housing element may be ineligible for certain State funding and grant opportunities and may be at risk for legal action from stakeholders or HCD.

SCAG staff would like to call your attention to SCAG's [HELPR 2.0](#), a web-mapping tool developed by SCAG to help local jurisdictions and stakeholders understand local land use, site opportunities, and environmental sensitivities for aligning housing planning with the state Department of Housing and Community Development's (HCD) [6th cycle housing element requirements](#).

SCAG Staff Comments

Table 23: Regional Housing Needs Assessment 2021-2029 on page G-26 of the City of Calabasas 2021-2029 Draft Housing Element refers to 131 very low income units. SCAG staff recommends revising this figure to 132 units to reflect the Final RHNA Allocation.

ENVIRONMENTAL JUSTICE

SCAG Staff Comments

Per [Senate Bill 1000](#) (SB 1000), local jurisdictions in California with disadvantaged communities are required to develop an Environmental Justice (EJ) Element or consider EJ goals, policies, and objectives in their General Plans when updating two or more General Plan Elements. The City of Calabasas does not have any disadvantaged communities but if the City would like to consider environmental justice in its General Plan Update, SCAG staff recommends that you review the [Environmental Justice Technical Report](#) and the updated [Environmental Justice Toolbox](#), which is a resource document to assist local jurisdictions in developing EJ-related goals and policies regarding solutions for EJ-related community issues.

Subject: Draft Environmental Impact Report for the City of Calabasas 2021-2029 Housing Element EIR Project, SCH #2021020150, City of Calabasas, Los Angeles County

Dear Mr. Klein:

The California Department of Fish and Wildlife (CDFW) has reviewed the Draft Environmental Impact Report (DEIR) from the City of Calabasas (City; Lead Agency) for the City of Calabasas 2021-2029 Housing Element EIR (Project). Thank you for the opportunity to provide comments and recommendations regarding those activities involved in the Project that may affect California fish and wildlife. Likewise, we appreciate the opportunity to provide comments regarding those aspects of the Project that CDFW, by law, may be required to carry out or approve through the exercise of its own regulatory authority under the Fish and Game Code.

CDFW's Role

CDFW is California's Trustee Agency for fish and wildlife resources and holds those resources in trust by statute for all the people of the State [Fish & G. Code, §§ 711.7, subdivision (a) & 1802; Pub. Resources Code, § 21070; California Environmental Quality Act (CEQA) Guidelines, § 15386, subdivision (a)]. CDFW, in its trustee capacity, has jurisdiction over the conservation, protection, and management of fish, wildlife, native plants, and habitat necessary for biologically sustainable populations of those species (Id., § 1802). Similarly, for purposes of CEQA, CDFW is charged by law to provide, as available, biological expertise during public agency environmental review efforts, focusing specifically on projects and related activities that have the potential to adversely affect State fish and wildlife resources.

CDFW is also submitting comments as a Responsible Agency under CEQA (Pub. Resources Code, § 21069; CEQA Guidelines, § 15381). CDFW expects that it may need to exercise regulatory authority as provided by the Fish and Game Code, including lake and streambed alteration regulatory authority (Fish & G. Code, § 1600 *et seq.*). Likewise, to the extent implementation of the Project as proposed may result in "take", as defined by State law, of any species protected under the California Endangered Species Act (CESA) (Fish & G. Code, § 2050 *et seq.*), or CESA-listed rare plant pursuant to the Native Plant Protection Act (NPPA; Fish & G. Code, § 1900 *et seq.*), CDFW recommends the Project proponent obtain appropriate authorization under the Fish and Game Code.

Michael Klein
City of Calabasas
September 13, 2021
Page 2 of 26

Project Description and Summary

Objective: The Project involves a comprehensive update to the Housing Element and related updates to the Land Use Element and Land Use Map of the City of Calabasas' General Plan. The Project also includes updates to the Safety Element and Circulation Element in compliance with new State rules.

- Housing Element Update is mandated by California State law to prepare a Housing Element update for State certification every eight years. The Housing Element is a state mandated part of the City's General Plan and includes goals, policies, programs, and objectives to further the development, improvement, and preservation of housing in Calabasas in a manner that is aligned with community desires, as well as regional growth objectives and State law. Local governments must adequately plan to meet the existing and projected housing needs of all economic segments of the community.
- The Land Use Element of the General Plan will be updated to reflect new housing sites identified in the Housing Element.
- The Safety Element is also part of the City of Calabasas General Plan and will be updated to include new information about natural and human-related hazards. The Safety Element currently includes policies to address the following types of hazards: geology and seismicity, stormwater management and flooding, fire hazards, radon gas, hazardous materials, and disaster response. The Safety Element update will focus on ensuring alignment with other City plans and addressing new state requirements pertaining to climate change, wildfire risk, and evacuation routes for residential neighborhoods.
- Changes to the Circulation Element will include removing references to adopted level of service thresholds. Level of service is a measure to describe how well roadway intersections and other transportation facilities operate for drivers. Level of service thresholds were used as a metric to evaluate environmental impacts of proposed projects. These thresholds will be replaced with vehicle miles traveled.

Location: The Project would apply to the entire City of Calabasas, located in western Los Angeles County, and is approximately 13.3 square miles in size. Nearby natural open space areas include Cheseboro and Palo Comado Canyon and Upper Las Virgenes Canyon Open Space Preserve to the north, Summit Valley Edmund D. Edelman Park to the east, and Topanga State Park and Malibu Creek State Park to the south. Adjacent cities include Agoura Hills to the west, Hidden Hills to the north, and Los Angeles to the east. Unincorporated Los Angeles County is located to the south, west, and north of Calabasas.

Comments and Recommendations

CDFW offers the comments and recommendations below to assist the City in adequately identifying, avoiding, and/or mitigating the Project's significant, or potentially significant, direct, and indirect impacts on fish and wildlife (biological) resources. CDFW recommends the measures or revisions below be included in a science-based monitoring program that contains adaptive management strategies as part of the Project's CEQA mitigation, monitoring, and reporting program (Pub. Resources Code, § 21081.6; CEQA Guidelines, § 15097).

Michael Klein
City of Calabasas
September 13, 2021
Page 3 of 26

Specific Comments

Comment #1: Mountain Lion (*Puma concolor*)

Issue: The Project site occurs within the range of mountain lion habitat.

Specific impacts: The Project as proposed may impact the southern California mountain lion population by temporarily and permanently increasing human presence, traffic, and noise. In addition, the area designated as Planned Development and east adjacent parcel designated as Residential-Multiple Family in Figure 2-4 would reduce the width of the existing wildlife corridor, as seen in Figure 4.3-3.

Why impacts would occur: Mountain lions may occur within the Project footprint or in areas immediately adjacent to the Project area. The Project may increase human presence (e.g., new development, public trail access), traffic, and noise as well as potential artificial lighting during Project construction and over the life of the Project. Most factors affecting the ability of the southern California mountain lion populations to survive and reproduce are caused by humans (Yap et al. 2019). As California has continued to grow in human population and communities expand into wildland areas, there has been a commensurate increase in direct and indirect interaction between mountain lions and people (CDFW 2013). As a result, the need to relocate or humanely euthanize mountain lions (depredation kills) may increase for public safety. Mountain lions are exceptionally vulnerable to human disturbance (Lucas 2020). Areas of high human activity have lower occupancy of rare carnivores. Mountain lions tend to avoid roads and trails by the mere presence of those features, regardless of how much they are used (Lucas 2020). Increased traffic could cause vehicle strikes. Mountain lions avoid areas with low woody vegetation cover and artificial outdoor lighting (Beier 1995). As human population density increases, the probability of persistence of mountain lions decreases (Woodroffe 2000).

Evidence impact would be significant: The mountain lion is a specially protected mammal in the State (Fish and G. Code, § 4800). In addition, on April 21, 2020, the California Fish and Game Commission accepted a petition to list an evolutionarily significant unit (ESU) of mountain lion in southern and central coastal California as threatened under CESA (CDFW 2020a). As a CESA candidate species, the mountain lion in southern California is granted full protection of a threatened species under CESA. The Project may have significant impacts because no mitigation has been proposed for any unavoidable direct and indirect, permanent or temporal losses, of habitat for mountain lion.

Recommended Potentially Feasible Mitigation Measure(s):

Mitigation Measure #1: Due to potential habitat within the Project footprint, within one year prior to Project implementation that includes site preparation, equipment staging, and mobilization, a CDFW-approved biologist knowledgeable of mountain lion species ecology should survey areas that may provide habitat for mountain lion to determine presence/absence and potential for natal dens. Caves and other natural cavities, and thickets in brush and timber provide cover and are used for denning. Females may be in estrus at any time of the year, but in California, most births probably occur in spring. Surveys should be conducted when the species is most likely to be detected, during crepuscular periods at dawn and dusk (Pierce and Bleich 2003). Survey results including negative findings should be submitted to CDFW prior to initiation of Project activities. The survey report should include a map of potential denning sites.

Michael Klein
City of Calabasas
September 13, 2021
Page 4 of 26

The survey report should include measures to avoid impacts mountain lions that may be in the area as well as dens and cubs, if necessary.

Mitigation Measure #2: If potential habitat for natal-dens are identified, CDFW recommends fully avoiding potential impacts to mountain lions, especially during spring, to protect vulnerable cubs. Two weeks prior to Project implementation, and once a week during construction activities, a CDFW-approved biologist should conduct a survey for mountain lion natal dens. The survey area should include the construction footprint and the area within 2,000 feet (or the limits of the property line) of the Project disturbance boundaries. CDFW should be notified within 24 hours upon location of a natal den. If an active natal den is located, during construction activities, all work should cease. No work should occur within a 2,000-foot buffer from a natal den. A qualified biologist should notify CDFW to determine the appropriate course of action. CDFW should also be consulted to determine an appropriate setback from the natal den that would not adversely affect the successful rearing of the cubs. No construction activities or human intrusion should occur within the established setback until mountain lion cubs have been successfully reared; the mountain lions have left the area; or as determined in consultation with CDFW.

Mitigation Measure #3: If “take” or adverse impacts to mountain lion cannot be avoided either during Project construction and over the life of the Project, project proponent should consult CDFW and must acquire a CESA Incidental Take Permit (pursuant to Fish & Game Code, § 2080 *et seq.*).

Recommendation: CDFW recommends the City evaluate the mountain lion territory size and use of habitat within and surrounding the Project vicinity. The City should analyze the change (i.e., increase) in human presence and area of anthropogenic influence that may be in mountain lion habitat and how it may impact mountain lion behavior, reproductive viability, and overall survival success. Based on these known anthropogenic impacts on mountain lions, CDFW also recommends the City provide compensatory mitigation for impacts to mountain lion. The CEQA document should justify how the proposed compensatory mitigation would reduce the impacts of the Project to less than significant. Finally, CDFW also recommends the City recirculate the DEIR with these analyses included.

Comment #2: Crotch’s Bumble Bee

Issue: Crotch’s bumble bee (*Bombus crotchii*) was identified in Table 4.3-1 as a special-status species with potential to occur in and near the Plan Area.

Specific impacts: The Project may result in temporal or permanent loss of suitable nesting and foraging habitat. Project ground-disturbing activities in areas in or adjacent to open space, may cause death or injury of adults, eggs, and larva; burrow collapse; nest abandonment; and reduced nest success.

Why impacts would occur: Ground disturbance and vegetation removal associated with Project implementation during the breeding season could result in the incidental loss of breeding success or otherwise lead to nest abandonment in areas in and adjacent to the Project Area. Development projects that are adjacent to open space, such as Las Virgenes Shopping Center and Avalon Apartments, may impact species such Crotch’s bumble bee. Project activities may result in temporal or permanent loss of colonies, and suitable nesting and foraging habitat.

Michael Klein
City of Calabasas
September 13, 2021
Page 5 of 26

Evidence impact would be significant: Crotch's bumble bee has a State ranking of S1/S2. This means that the Crotch's bumble bee is considered critically imperiled or imperiled and is extremely rare (often 5 or fewer populations). Also, Crotch's bumble bee has a very restricted range and steep population declines make the species vulnerable to extirpation from the State (CDFW 2017). Accordingly, Crotch's bumble bee meets the CEQA definition of rare, threatened, or endangered species (CEQA Guidelines, § 15380). Therefore, take of Crotch's bumble bee could require a mandatory finding of significance by the City or a project proponent (CEQA Guidelines, § 15065). Project activities may have potential to substantially reduce or adversely modify habitat, impair the viability of populations, and reduce the number and range of the Crotch's bumble bee.

Recommended Potentially Feasible Mitigation Measure(s):

Mitigation Measure #1: Due to suitable habitat within the Project site, CDFW recommends the DEIR include a mitigation measure whereby individual subsequent projects analyze potential impacts on Crotch's bumble bee. If suitable habitats are on or adjacent to subsequent project sites, within one year prior to vegetation removal and/or grading for any subsequent projects, a qualified entomologist familiar with the species behavior and life history should conduct surveys to determine the presence/absence of Crotch's bumble bee. Surveys should be conducted during flying season when the species is most likely to be detected above ground, between March 1 to September 1 (Thorp et al. 1983). Survey results, including negative findings, should be submitted to CDFW prior to implementing Project-related ground-disturbing activities. At minimum, a survey report should provide the following:

- a) A description and map of the survey area, focusing on areas that could provide suitable habitat for Crotch's bumble bee. CDFW recommends the map show surveyor(s) track lines to document that the entire site was covered during field surveys.
- b) Field survey conditions that should include name(s) of qualified entomologist(s) and brief qualifications; date and time of survey; survey duration; general weather conditions; survey goals, and species searched.
- c) Map(s) showing the location of nests/colonies.
- d) A description of physical (e.g., soil, moisture, slope) and biological (e.g., plant composition) conditions where each nest/colony is found. A sufficient description of biological conditions, primarily impacted habitat, should include native plant composition (e.g., density, cover, and abundance) within impacted habitat (e.g., species list separated by vegetation class; density, cover, and abundance of each species).

Mitigation Measure #2: If Crotch's bumble bee is detected, the subsequent CEQA document should require project proponents, in consultation with a qualified entomologist, to develop a plan to fully avoid impacts to Crotch's bumble bee. The plan should include effective, specific, enforceable, and feasible measures. An avoidance plan should be submitted to TVMWD prior to implementing Project-related ground-disturbing activities and/or vegetation removal where there may be impacts to Crotch's bumble bee.

Mitigation Measure #3: If Crotch's bumble bee is detected and if impacts to Crotch's bumble bee cannot be feasibly avoided during Project construction and activities, project proponents/qualified entomologist should coordinate with CDFW to obtain appropriate handling permits for incidental take of Crotch's bumble bee and provide appropriate mitigation for impacts to Crotch's bumble bee habitat. CDFW recommends the project proponent mitigate for impacts

Michael Klein
City of Calabasas
September 13, 2021
Page 6 of 26

to Crotch's bumble bee habitat at a ratio comparable to the Project's level of impacts.

Comment #3: Restoration Plans

Issue: Mitigation Measure BIO-5 (MM BIO-5) as written, may not provide sufficient mitigation for impacts to "riparian vegetation and/or CDFW sensitive natural communities" with a "2:1 ratio for permanent impacts and a 1:1 ratio for temporary impacts".

Specific impact: CDFW is concerned that this measure does not account for impacts to a variety of sensitive natural communities with differences in sensitivity. Pages 4.3-15 to 4.3-18 name and describe each sensitive community within the Project boundary. They also include the State rarity ranking, which reflects the condition and imperilment of the community throughout the range within the State. Some communities within the Project Area are more sensitive than others so a 2:1 impact ratio for an S2 community, for example, may not be as sufficient as it would be for an S4 community. Higher impact ratios should mitigate for the sensitivity and rarity of the community.

Why impacts would occur: CDFW considers vegetation communities, alliances, and associations with a statewide ranking of S1, S2, S3, and some S4 as sensitive and declining at the local and regional level (Sawyer et al. 2008). An S3 ranking indicates there are 21 to 80 occurrences of this community in existence in California, S2 has 6 to 20 occurrences, and S1 has less than 6 occurrences. Project implementation that includes grading, vegetation clearing, road construction, utilities construction, road maintenance, and other activities that may result in direct mortality, population declines, or local extirpation of sensitive vegetation communities. Moreover, the impact ratio presented may not fully mitigate for impacts to an extremely rare community. Impacts on a sensitive vegetation alliance is considered significant to CDFW. Moreover, a project may continue to have direct or indirect effects, whether temporary or permanent, to sensitive vegetation communities by not sufficiently mitigating for the community.

Evidence impacts would be significant: Inadequate avoidance, minimization, and mitigation measures for impacts to potentially sensitive communities and riparian vegetation on site will result in the Project continuing to have a substantial adverse direct, indirect, and cumulative effect. This, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by CDFW or USFWS. Impacts to all sensitive communities should be considered significant under CEQA unless they are clearly mitigated below a level of significance.

Recommended Potentially Feasible Mitigation Measure(s):

Mitigation Measure: CDFW recommends that there be no net loss of riparian habitat or sensitive communities within the Project boundary. CDFW recommends mitigation for impacts to riparian habitat/ sensitive communities should be provided within the Project boundary or at a CDFW approved mitigation bank. The 2:1 impact ratio should be a minimum and compensatory mitigation should increase if a project would result in permanent loss of increasingly sensitive vegetation community, riparian habitat within a contiguous riparian corridor or loss of an isolated, remnant habitat patch. Mitigation should increase if a project would impact a riparian/sensitive communities considered rare in the State (i.e., S1, S2, or S3). Mitigation should further increase if the riparian habitat is considered very threatened or threatened (i.e., 0.1, 0.2). Mitigation should further increase if the riparian habitat impacted supports special

Michael Klein
City of Calabasas
September 13, 2021
Page 7 of 26

status species, specifically obligate riparian breeders (e.g., Coastal California gnatcatcher (*Polioptila californica californica*)). Mitigation should replace the same vegetation association/alliance that was impacted.

Comment #4: Planned Development Area

Issue: Figure 2-4 Proposed Land Use Map shows one area designated as “Planned Development” and an adjacent parcel to the east designated as “Residential-Multiple Family”. These two parcels lie within land designated as Open Space-Resource Protection, and there is possibility of impacting a number of biological resources by developing this area.

Specific impacts: The designated Planned Development Area identified in Figure 2-4 is within designated Open Space, so any development that may occur in this area may result in possible impacts to biological resources. According to the DEIR, special status species such as mountain lion (*Puma concolor*), American badger (*Taxidea taxus*), red-legged frog (*Rana draytonii*), slender mariposa lily (*Calochortus clavatus* var. *gracilis*), Parry’s spineflower (*Chorizanthe parryi* var. *parryi*), and Southern California black walnut (*Juglans californica*) may be found in habitats such as those identified in the Planned Development Area. In addition, according to the [West Village at Calabasas Project Recirculated Draft Environmental Impact Report](#) (September 2020), the location is located in an ancient landslide area, so any development would require a much larger impact area in order to remediate for any possibility for landslides.

Why impacts would occur: Project implementation may include grading, vegetation clearing, road construction, utilities construction, road maintenance, and other activities that may result in direct mortality, population declines, habitat removal, or local extirpation of sensitive vegetation communities and special status species. In addition, the Project may result in temporal or permanent loss of aquatic or upland habitat. Threats to amphibian species include loss of aquatic breeding and upland non-breeding habitat. In addition, development in this area could have the potential to develop temporary and permanent adverse edge effects that could reduce the use of the surrounding habitat by wildlife for migration or movement in the area. Development in this location will increase human presence and cause impacts from lighting, noise, vehicle traffic, and increase the possibility of human-wildlife interaction.

Evidence impacts would be significant: Loss of this area in particular may result in a substantial adverse direct and cumulative effect, either directly or through habitat loss and/or modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by CDFW or United States Fish and Wildlife Service (USFWS).

Recommended Potentially Feasible Mitigation Measure(s):

Recommendation: In order to prevent the loss of sensitive/special status biological resources, adequate habitat for special status species, and the further narrowing of a wildlife corridor, CDFW recommends the land use designation for this parcel to be changed to “Open Space-Resource Protection,” the same as the surrounding land use. In other words, CDFW recommends this area in particular remain undeveloped and be maintained as open space under protection.

Michael Klein
City of Calabasas

Page 8 of 26

Comment #5: Impacts to Oak Trees and Oak Woodland

Issue: The DEIR states it will follow the City's [Oak Tree Ordinance and Oak Tree Preservation and Protection Guidelines](#) (Municipal Code Title 17, Article III, Chapter 17.32) for impacts to oak trees (City of Calabasas 2012). However, this may be insufficient to mitigate for impacts to oak trees and oak woodlands.

Specific impact: Project-activities and development may directly remove individual oak trees, oak woodland, and the understory associated vegetation. In addition, the Project may impact oak trees within their critical root zone. As a result, the Project may result in a net loss of oak trees and oak woodlands.

Why impacts would occur: The Oak Tree Ordinance states, "Replacement or placement of additional oak trees, scrub oak habitat, associated hardwood canopy, land or wildlife habitat to proportionally offset the impacts associated with the loss of oak trees, scrub oak habitat, limbs, roots or potential long-term adverse impacts due to alterations or encroachment within the protected zone. Locations appropriate to such new plantings may be proposed by the applicant and must be approved by city staff prior to the granting of a permit based upon the potential for long-term viability". As written, the Oak Tree Ordinance does not specify for the replacement, replanting, or restoration of oak trees or oak woodlands associated understory, there is only mention of the associated hardwood canopy. Without appropriate replacement or restoration of individual oak trees/woodlands and associated understory, Project activities may temporarily or permanently impact oak habitat.

Evidence impacts would be significant: Oak woodlands serve several important ecological functions such as protecting soils from erosion and land sliding; regulating water flow in watersheds; and maintaining water quality in streams and rivers. Oak trees provide nesting and perching habitat for approximately 170 species of birds (Griffin and Muick 1990). Oak woodlands also have higher levels of biodiversity than any other terrestrial ecosystem in California (Block et al. 1990). Coast live oak and old-growth oak trees (native oak tree that is greater than 15 inches in diameter) are of importance due to increased biological values and increased temporal loss. Due to the historic and on-going loss of this ecologically important vegetation community, oak trees and woodlands are protected by local and State ordinances. CDFW considers oak woodlands a sensitive vegetation community.

Valley oak is used by various cavity-nesting and storing birds and mammals. Pocket gopher, California ground squirrel, and deer mouse are heavy consumers of valley oak seedlings. Acorns are an important diet item of wildlife such as California ground squirrel, pocket gopher, scrub jay, yellow-billed magpie, acorn woodpecker, black-tailed deer, feral pig, and of cattle (Howard J.L, 1992). Removal of trees may temporarily or permanently impact available habitat and resources for wildlife in the area. Moreover, oak trees and woodlands are protected by the Oak Woodlands Conservation Act (pursuant under Fish and Game Code sections 1360-1372) and Public Resources Code section 21083.4 due to the historic and on-going loss of these resources

Inadequate or lack of avoidance, minimization, and mitigation measures for impacts to special status plant species, such as oak, will result in the Project continuing to have a substantial adverse direct, indirect, and cumulative effect, either directly or through habitat modifications, on

Michael Klein
City of Calabasas
September 13, 2021
Page 9 of 26

any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by CDFW.

Recommended Potentially Feasible Mitigation Measure(s):

Mitigation Measure #1 – Critical Root Zone: CDFW recommends the City retain a certified arborist. Prior to any Project ground-disturbing activities that may impact trees or tree trimming, an arborist should conduct a site visit to identify the following: 1) trees where impacts on the CRZ would occur, 2) trees that need to be cut or limbed, and 3) trees where roots (i.e., tap root, main roots, and any surface-feeding roots) would need to be exposed/unearthed. The certified arborist should prepare a plan to protect the CRZ. CDFW recommends that Project construction and activities including (but not limited to) staging areas, debris piles, and soil compaction not occur within the CRZ. The CRZ should be demarcated with clear flagging, fencing, and signage. The certified arborist should also prepare a plan consisting of Best Management Practices to minimize impacts on trees as a result of cutting and limbing, as well as exposure of tree roots. If roots or canopy of any oak trees must be cut or disturbed, CDFW recommends that these actions be performed by a certified arborist or under the supervision of a certified arborist.

Mitigation Measure #2 - Native Tree Planting Plan: CDFW recommends the City retain a qualified restoration-specialist and/or arborist to develop a Native Tree Planting Plan. The plan should include effective and detailed measures associated with planted tree protection, maintenance, monitoring, reporting, and adaptive management. CDFW recommends that all replacement oak trees regardless of species be monitored for at least seven years after planting, with three additional years of no irrigation, weeding, or further replacement planting. The planting plan should also include Best Management Practices to acquire replacement native trees, especially coast live oak trees. The qualified restoration specialist should acquire appropriately sized, locally sourced trees from a local native plant nursery that implements Phytophthora/Clean Nursery Stock protocols. This may reduce the probability of introducing trees contaminated with pests, diseases, and pathogens that could spread and infect native oak trees or habitats. Seeds should originate from trees of the same species (i.e., Genus, species, subspecies, and variety) as the species impacted. A Native Tree Planting Plan should be provided to the City prior to any ground-disturbing activities impacting trees and/or tree removal.

Mitigation Measure #3: Prior to any Project ground-disturbing activities, the City/project proponent should determine:

- 1) An inventory of all oak trees removed or encroached upon during project activities, separated by species and DBH;
- 2) Acres of oak woodlands impacted, and density, coverage, and abundance of understory vegetation species impacted by life form (i.e., grass, forb, shrub, subshrub, vine);
- 3) Mitigation ratios if the loss of any oaks are anticipated and total number and/or area of replacement trees and vegetation. The mitigation site should mimic the pre-Project percent basal, canopy, and vegetation cover of oak woodland impacted. Associated understory and early successional native species should be planted and monitored along with trees to achieve viable habitat and adequately compensate for biological functions lost;
- 4) Location of restoration areas and a discussion of the adequacy of the location(s) to serve as mitigation (e.g., would support oak trees/oak woodlands; avoid habitat type conversion);

Michael Klein
City of Calabasas
September 13, 2021
Page 10 of 26

- 5) The location and assessment of appropriate reference site(s) to inform the appropriate planting rate to recreate the pre-Project function, density, percent basal, canopy, and vegetation cover of oak woodland impacted;
- 6) Scientific [Genus and species (subspecies/variety if applicable)] of all plants being used for restoration;
- 7) Location(s) of propagule source. Propagules should be collected or grown from on-site sources or adjacent areas within the same watershed and should not be purchased from a supplier. Seeds must originate from plants/trees of the same species (i.e., Genus, species, subspecies, and variety) as the species impacted; and,
- 8) Species-specific planting methods (i.e., container or bulbs).

Comment #6: Tree Diseases, Pests, and Pathogens

Issue: The Project may remove trees and can possibly spread material infected with invasive tree diseases, pests, and pathogens.

Specific impacts: Without taking proper precaution, the Project may spread tree insect pests and diseases into areas not currently exposed to these stressors. This could result in expediting the loss of native trees and plant communities. Loss of trees may result in loss of foraging and perching habitat for small mammals, birds, and raptors.

Why impacts would occur: The Project may remove trees that could host diseases and pests. One such pathogen is sudden oak death. Sudden oak death has become the most common cause of mortality of oak (*Quercus* genus) and other native trees (Phytosphere 2015). Mortality rates of oak trees are greater than 50 percent in some areas impacted by sudden oak death (Phytosphere 2012). Tree dieback can have cascading impacts on the habitat and ecosystem, particularly avian distribution and abundance (Monahan and Koenig 2006). Another pest is the polyphagous shot hole borer, which hosts on many native trees species that include box elder (*Acer negundo*), California sycamore (*Platanus racemosa*), willows (*Salix* genus), oaks, cottonwoods (*Populus* genus), and alders (*Alnus* genus) (Calinvasives 2021). Diseases such as sudden oak death can spread via equipment and transport of infected material. These fragments can be spread to new locations if equipment and tools are not disinfected or cleaned before moving to the next work location. Infected material that is transported off site for disposal may expose trees and plant communities to pest and disease. This could result in expediting the loss of California sycamore, oak trees, and other native trees and plant communities within and adjacent to a project area.

Evidence impacts would be significant: The Project may have a substantial adverse effect on any sensitive natural communities identified in local or regional plans, policies, and regulations or by the CDFW. The Project may result in a substantial adverse effect, either directly or through habitat modifications, on species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by CDFW that are dependent on woodlands susceptible to insect and disease pathogens.

Recommended Potentially Feasible Mitigation Measure(s):

Mitigation Measure: CDFW recommends that the subsequent CEQA document include a measure to mitigate the spread of invasive pests and diseases by implementing the following:

Michael Klein
City of Calabasas
September 13, 2021
Page 11 of 26

- 1) Prior to tree removal, a certified arborist should evaluate trees for infectious tree diseases including but not limited to: [sudden oak death](#) (*Phytophthora ramorum*), [thousand canker fungus](#) (*Geosmithia morbida*), [polyphagous shot hole borer](#) (*Euwallacea* spp.), and [goldspotted oak borer](#) (*Agrilus auroguttatus*) (TCD 2021; UCANR 2021; Phytosphere Research 2012; UCIPM 2013).
- 2) If a certified arborist determines trees are impacted by infectious pests or diseases, the certified arborist should prepare an Infectious Tree Disease Management Plan or develop a detailed, robust, enforceable, and feasible list of preventative measures. A plan/list should provide measures relevant for each tree pest or disease observed. To avoid the spread of infectious tree pests and diseases, infected trees should not be transported from a project area without first being treated using best available management practices described Infectious Tree Disease Management Plan or list of preventative measures.
- 3) If possible, all tree material, especially infected tree material, should be left on site. The material could be chipped for use as ground cover or mulch. Pruning and power tools should be cleaned and disinfected before use to prevent introducing pathogens from known infested areas, and after use to prevent spread of pathogens to new areas.

Comment #7: In-lieu Fees

Issue: MM BIO-5 *Restoration Plans* mentions an “in lieu fee program” as an option if on-site or off-site restoration is not feasible.

Specific impacts: Impacting riparian vegetation and/or sensitive natural communities also has the potential to impact directly, or indirectly through habitat loss, sensitive, special status, threatened, and/or endangered plants, and wildlife. In addition, the DEIR does not provide sufficient information for CDFW to evaluate the adequacy of in-lieu fees to offset the cumulative loss of biological resources associated with riparian vegetation and/or sensitive natural communities.

Why impacts would occur: It is unclear how proposed payments would be sufficient to offset impacts associated with the Project. Typical compensatory mitigation includes the purchase of land consisting of suitable habitat and/or individuals of the impacted species. CDFW is concerned that an in-lieu fee would not provide enough funding for preservation, enhancement, restoration, or other mitigation activities to offset impacts to sensitive species and habitats.

The DEIR does not explain or make a connection as to why in-lieu fee is adequate to offset Project impacts so that the Project would have no impacts. The DEIR does not discuss or provide the following information:

- 1) Whether the in-lieu fee is going towards an established program;
- 2) How that program is designed to (and will) mitigate the effects at issue at a level meaningful for purposes of CEQA;
- 3) What the in-lieu fee would acquire. It is unclear if the in-lieu fee would be used to acquire land for preservation, enhancement, and/or restoration purposes, or if the in-lieu fee would be used to purchase credits at a mitigation bank, or none of the above;
- 4) What biological resources would the in-lieu fee protect/conservate;
- 5) Why the in-lieu fee is appropriate for mitigating cumulative loss of biological resources in

Michael Klein
City of Calabasas
September 13, 2021
Page 12 of 26

- the Project Area;
- 6) How the in-lieu fee is sufficient to purchase land or credits at a mitigation bank;
 - 7) Where the project proponent may acquire land or purchase credits at a mitigation bank so that the in-lieu fee would offset Project impacts on biological resources in the Project Area;
 - 8) When the project proponent would use the fee in the Project area. Mitigation payment does not equate to mitigation if the funds are not being used. Also, temporal impacts on biological resources may occur as long as the project proponent fails to implement its proposed mitigation;
 - 9) How the project proponent would commit to the project to paying the in-lieu fee. For example, when would the project proponent require payment from the project applicant, how long would the project applicant have to pay the fee, and what mechanisms would project proponent implement to ensure the fee is paid? Mitigation measures must be fully enforceable through permit conditions, agreements, or other legally binding instruments (CEQA Guidelines, § 15126.4);
 - 10) What performance measures the proposed mitigation would achieve (CEQA Guidelines, § 15126.4);
 - 11) What type(s) of potential action(s) that can feasibly achieve those performance standards (CEQA Guidelines, § 15126.4); and,
 - 12) How the in-lieu fee would be adequate such that no impacts would occur as a result of the Project.

Evidence impacts would be significant: Without identifying when mitigation-activities will be implemented, additional temporal impacts to biological resources may occur. Inadequate avoidance and mitigation measures may result in the Project continuing to have a substantial adverse direct and cumulative effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status in local or regional plans, policies, or regulations, or by CDFW or USFWS. This Project may have the potential to reduce the habitat of rare plants or wildlife; cause rare plants or wildlife population to drop below self-sustaining levels; threatened to eliminate a plant or animal community; and substantially reduce the number or restrict the range of an endangered, rare, or threatened species [CEQA Guidelines, § 15065(a)(1)]. Additionally, this Project has possible environmental effects that are cumulatively considerable [CEQA Guidelines, § 15065(a)(3)].

Recommended Potentially Feasible Mitigation Measure(s):

Recommendation #1: CDFW recommends the EIR provide adequate, complete, and good-faith disclosure of information that would address the following in relation to the Project:

- 1) Whether the in-lieu fee is going towards an established program;
- 2) How the program is designed to (and will) mitigate the effects at issue at a level meaningful for purposes of CEQA;
- 3) What the in-lieu fee would acquire;
- 4) What biological resources would the in-lieu fee protect/conserves;
- 5) Why the in-lieu fee is appropriate for mitigating the cumulative loss of biological resources;
- 6) Why the in-lieu fee is sufficient to purchase land or credits at a mitigation bank;
- 7) Where the project proponent may acquire land or purchase credits at a mitigation bank;

Michael Klein
City of Calabasas
September 13, 2021
Page 13 of 26

- 8) When the project proponent would use the in-lieu fee; and,
- 9) How the in-lieu fee would be adequate such that no impacts would occur as a result of the Project.

The project proponent should provide any technical data, maps, plot plans, diagrams, and similar relevant information in addressing these concerns (CEQA Guidelines, § 15147).

Recommendation #2: CDFW recommends that the project proponent provide a discussion describing how it intends to commit to mitigation via the in lieu fee. For example, the project proponent should provide specifics as to when would the project proponent require payment from the project applicant, how long would the project applicant have to pay the fee, what mechanisms would the project proponent implement to ensure the fee is paid, and when the project proponent would use the project's payment for mitigation. Also, the project proponent should provide specific performance standards and actions to achieve those performance standards.

Recommendation #3: CDFW recommends that the project proponent recirculate the DPEIR for more meaningful public review and assessment of the project proponent's in-lieu fee. Additionally, the Project proponent should recirculate the DPEIR if the proposed mitigation measure (i.e., in-lieu fee) would not reduce potential effects to less than significant and new measures must be required [CEQA Guidelines, § 15073.5(b)(2)].

Additional Recommendations

Nesting Birds. CDFW recommends avoiding any construction activity during nesting season. If not feasible, CDFW recommends modifying MM BIO-2 by expanding the time period for bird and raptor nesting from February 1 through August 31 to January 1 through September 15. If the Project occurs between January 1 through September 15, a nesting bird and raptor survey should be conducted as stated in MM BIO-2, prior to any ground-disturbing activities (e.g., staging, mobilization, grading) as well as prior to any vegetation removal within the Project site.

It should be noted that the temporary halt of Project activities within nesting buffers during nesting season does not constitute effective mitigation for the purposes of offsetting Project impacts associated with habitat loss. Additional mitigation would be necessary to compensate for the removal of nesting habitat within the Project site based on acreage of impact and vegetation composition. CDFW shall be consulted to determine proper mitigation for impacts to occupied habitat depending on the status of the bird species. Mitigation ratios would increase with the occurrence a California Species of Special Concern and would further increase with the occurrence of a CESA-listed species.

Restoration Plans Final Report. MM BIO-5 states, "Five years after project start, a final report shall be submitted to the City and the CDFW, which shall at a minimum discuss the implementation, monitoring and management of the mitigation project over the five-year period, and indicate whether the Restoration Plan has met the established success criteria." While CDFW agrees that a final report shall be submitted to determine success, five years after the start of the project rather than the start of the restoration may not be sufficient time to determine success. CDFW recommends amending the language by excluding the ~~strikethrough~~ and including the underlined language as follows:

Michael Klein
City of Calabasas
September 13, 2021
Page 14 of 26

“Five years after ~~project start~~ the start of restoration activities, a final report shall be submitted to the City and the CDFW, which shall at a minimum discuss the implementation, monitoring and management of the mitigation project over the five-year period, and indicate whether the Restoration Plan has met the established success criteria. [...]”

Rodenticides. CDFW recommends project proponent prevent the use of second-generation anticoagulant rodenticides on any project associated with the Project.

Data. CEQA requires that information developed in environmental impact reports and negative declarations be incorporated into a database [i.e., California Natural Diversity Database (CNDDDB)] which may be used to make subsequent or supplemental environmental determinations [Pub. Resources Code, § 21003, subd. (e)]. Accordingly, CDFW recommends that the subsequent CEQA document include measures where lead agencies of individual projects tiering from the subsequent CEQA document report any special status species detected during preparation of project-level environmental impact analyses/environmental documents. Special status species information should be submitted to the CNDDDB by completing the [Online Field Survey Form](#) (CDFW 2021). The lead agency should ensure all pertinent data has been properly submitted, with all applicable data fields filled out, prior to finalizing/adopting an environmental document. The lead agency should provide CDFW with confirmation of data submittal.

Mitigation and Monitoring Reporting Plan. CDFW recommends the City update the Project's proposed Biological Mitigation Measures and condition the environmental document to include mitigation measures recommended in this letter. CDFW provides comments to assist project proponents in developing mitigation measures that are specific, detailed (i.e., responsible party, timing, specific actions, location), and clear in order for a measure to be fully enforceable and implemented successfully via a mitigation monitoring and/or reporting program (CEQA Guidelines, § 15097; Pub. Resources Code, § 21081.6). The City is welcome to coordinate with CDFW to further review and refine the Project's mitigation measures. Per Public Resources Code section 21081.6(a)(1), CDFW has provided the City with a summary of our suggested mitigation measures and recommendations in the form of an attached Draft Mitigation and Monitoring Reporting Plan (MMRP; Attachment A).

Filing Fees

The Project, as proposed, would have an impact on fish and/or wildlife, and assessment of filing fees is necessary. Fees are payable upon filing of the Notice of Determination and serve to help defray the cost of environmental review by CDFW. Payment of the fee is required for the underlying Project approval to be operative, vested, and final (Cal. Code Regs., tit. 14, § 753.5; Fish & G. Code, § 711.4; Pub. Resources Code, § 21089).

Conclusion

We appreciate the opportunity to comment on the Project to assist the City of Calabasas in adequately analyzing and minimizing/mitigating impacts to biological resources. CDFW requests an opportunity to review and comment on any response that the City has to our comments and to receive notification of any forthcoming hearing date(s) for the Project [CEQA Guidelines, §

Attachment A: Draft Mitigation and Monitoring Reporting Plan

CDFW recommends the following language to be incorporated into a future environmental document for the Project.

Biological Resources (BIO)			
Mitigation Measure (MM) or Recommendation (REC)		Timing	Responsible Party
MM-BIO-1- Mountain Lion	Due to potential habitat within the Project footprint, within one year prior to Project implementation that includes site preparation, equipment staging, and mobilization, a CDFW-approved biologist knowledgeable of mountain lion species ecology shall survey areas that may provide habitat for mountain lion to determine presence/absence and potential for natal dens. Caves and other natural cavities, and thickets in brush and timber provide cover and are used for denning. Females may be in estrus at any time of the year, but in California, most births probably occur in spring. Surveys shall be conducted when the species is most likely to be detected, during crepuscular periods at dawn and dusk. Survey results including negative findings shall be submitted to CDFW prior to initiation of Project activities. The survey report shall include a map of potential denning sites. The survey report shall include measures to avoid impacts mountain lions that may be in the area as well as dens and cubs, if necessary.	Preparation of project-level CEQA document/ prior to finalizing project-level CEQA document	Project-level lead agency
MM-BIO-2- Mountain Lion	If potential habitat for natal dens are identified, potential impacts to mountain lions shall be fully avoided, especially during spring, to protect vulnerable cubs. Two weeks prior to Project implementation, and once a week during construction activities, a CDFW-approved biologist shall conduct a survey for mountain lion natal dens. The survey area shall include the construction footprint and the area within 2,000 feet (or the limits of the property line) of the Project disturbance boundaries. CDFW shall be notified within	Preparation of project-level CEQA document/ prior to finalizing project-level	Project-level lead agency

Michael Klein
 City of Calabasas
 September 13, 2021
 Page 18 of 26

	<p>24 hours upon location of a natal den. If an active natal den is located, during construction activities, all work shall cease. No work shall occur within a 2,000-foot buffer from a natal den. A qualified biologist shall notify CDFW to determine the appropriate course of action. CDFW shall also be consulted to determine an appropriate setback from the natal den that would not adversely affect the successful rearing of the cubs. No construction activities or human intrusion shall occur within the established setback until mountain lion cubs have been successfully reared; the mountain lions have left the area; or as determined in consultation with CDFW.</p>	CEQA document	
MM-BIO-3-Mountain Lion	<p>If “take” or adverse impacts to mountain lion cannot be avoided either during Project construction and over the life of the Project, project proponent shall consult CDFW and must acquire a CESA Incidental Take Permit (pursuant to Fish & Game Code, § 2080 <i>et seq.</i>).</p>	Preparation of project-level CEQA document/ prior to finalizing project-level CEQA document	Project-level lead agency
REC-1-Mountain Lion	<p>CDFW recommends the City evaluate the mountain lion territory size and use of habitat within and surrounding the Project vicinity. The City should analyze the change (i.e. increase) in human presence and area of anthropogenic influence that will now be in mountain lion habitat and how it may impact mountain lion behavior, reproductive viability, and overall survival success. Based on these known anthropogenic impacts on mountain lions, CDFW also recommends the City provide compensatory mitigation for impacts to mountain lion. The CEQA document should justify how the proposed compensatory mitigation would reduce the impacts of the Project to less than significant. Finally, CDFW also recommends the City recirculate the DEIR with these analyses included.</p>		

Michael Klein
 City of Calabasas

 Page 19 of 26

<p>MM-BIO-7-Crotch's bumble bee</p>	<p>Due to suitable habitat within the Project boundary, individual subsequent projects shall analyze potential impacts on Crotch's bumble bee. If suitable habitat is on subsequent project sites, within one year prior to vegetation removal and/or grading for any individual subsequent projects, a qualified entomologist familiar with the species behavior and life history shall conduct surveys to determine the presence/absence of Crotch's bumble bee. Surveys shall be conducted during flying season when the species is most likely to be detected above ground, between March 1 to September 1 (Thorp et al. 1983). Survey results, including negative findings, shall be submitted to CDFW prior to implementing Project-related ground-disturbing activities. At minimum, a survey report shall provide the following:</p> <ul style="list-style-type: none"> a) A description and map of the survey area, focusing on areas that could provide suitable habitat for Crotch's bumble bee. CDFW recommends the map show surveyor(s) track lines to document that the entire site was covered during field surveys. b) Field survey conditions that shall include name(s) of qualified entomologist(s) and brief qualifications; date and time of survey; survey duration; general weather conditions; survey goals, and species searched. c) Map(s) showing the location of nests/colonies. d) A description of physical (e.g., soil, moisture, slope) and biological (e.g., plant composition) conditions where each nest/colony is found. A sufficient description of biological conditions, primarily impacted habitat, shall include native plant composition (e.g., density, cover, and abundance) within impacted habitat (e.g., species list separated by vegetation class; density, cover, and abundance of each species). 	<p>Prior to project ground-disturbing activities</p>	<p>Project-level lead agency</p>
--	---	--	----------------------------------

Michael Klein
 City of Calabasas
 September 13, 2021
 Page 20 of 26

MM-BIO-8- Crotch's bumble bee	If Crotch's bumble bee is detected, the subsequent CEQA document shall require project proponents, in consultation with a qualified entomologist, to develop a plan to fully avoid impacts to Crotch's bumble bee. The plan shall include effective, specific, enforceable, and feasible measures. An avoidance plan shall be submitted to the project proponent prior to implementing Project-related ground-disturbing activities and/or vegetation removal where there may be impacts to Crotch's bumble bee.	Prior to project ground-disturbing activities	Project-level lead agency
MM-BIO-9- Crotch's bumble bee	If Crotch's bumble bee is detected and if impacts to Crotch's bumble bee cannot be feasibly avoided during Project construction and activities, project proponents /qualified entomologist shall coordinate with CDFW to obtain appropriate handling permits for incidental take of Crotch's bumble bee and provide appropriate mitigation for impacts to Crotch's bumble bee habitat. The project proponents shall mitigate for impacts to Crotch's bumble bee habitat at a ratio comparable to the Project's level of impacts.	Prior to project ground-disturbing activities	Project-level lead agency
MM-BIO-10- Restoration Plans	There shall be no net loss of riparian habitat or sensitive communities within the Project boundary. Mitigation for impacts to riparian habitat/ sensitive communities shall be provided within the Project boundary or at a CDFW approved mitigation bank. The 2:1 impact ratio shall be a minimum and compensatory mitigation shall increase if a project would result in permanent loss of increasingly sensitive vegetation community, riparian habitat within a contiguous riparian corridor or loss of an isolated, remnant habitat patch. Mitigation shall increase if a project would impact a riparian/sensitive communities considered rare in the State (i.e., S1, S2, or S3). Mitigation shall further increase if the riparian habitat is considered very threatened or threatened (i.e., 0.1, 0.2). Mitigation shall further increase if the riparian habitat impacted supports special status species, specifically obligate riparian breeders (e.g., Coastal California gnatcatcher (<i>Polioptila californica californica</i>)). Mitigation shall replace the same vegetation association/alliance that was impacted.	Preparation of project-level CEQA document/ prior to finalizing project-level CEQA document	Project-level lead agency

Michael Klein
 City of Calabasas
 September 13, 2021
 Page 21 of 26

REC-2-Planned Development Area	In order to prevent the loss of sensitive/special status biological resources, adequate habitat for special status species, and the further narrowing of a wildlife corridor, CDFW recommends the land use designation for this parcel to be changed to "Open Space-Resource Protection," the same as the surrounding land use. In other words, CDFW recommends this area in particular remain undeveloped and be maintained as open space under protection.	Prior to water diversion construction and activities	Project-level lead agency
MM-BIO-11-Oak trees/Oak woodland	The City will retain a certified arborist. Prior to any Project ground-disturbing activities that may impact trees or tree trimming, an arborist shall conduct a site visit to identify the following: 1) trees where impacts on the CRZ would occur, 2) trees that need to be cut or limbed, and 3) trees where roots (i.e., tap root, main roots, and any surface-feeding roots) would need to be exposed/unearthed. The certified arborist shall prepare a plan to protect the CRZ. CDFW recommends that Project construction and activities including (but not limited to) staging areas, debris piles, and soil compaction not occur within the CRZ. The CRZ shall be demarcated with clear flagging, fencing, and signage. The certified arborist shall also prepare a plan consisting of Best Management Practices to minimize impacts on trees as a result of cutting and limbing, as well as exposure of tree roots. If roots or canopy of any oak trees must be cut or disturbed, these actions will be performed by a certified arborist or under the supervision of a certified arborist.	Prior to water diversion construction and activities	Project-level lead agency
MM-BIO-12- Oak trees/Oak woodland	CDFW recommends the City retain a qualified restoration specialist and/or arborist to develop a Native Tree Planting Plan. The plan should include effective and detailed measures associated with planted tree protection, maintenance, monitoring, reporting, and adaptive management. CDFW recommends that all replacement oak trees regardless of species be monitored for at least seven years after planting, with three additional years of no irrigation, weeding, or further replacement planting. The planting plan should also include Best Management Practices to acquire	Prior to water diversion construction and activities	City of Calabasas

Michael Klein
 City of Calabasas
 September 13, 2021
 Page 22 of 26

	<p>replacement native trees, especially coast live oak trees. The qualified restoration specialist should acquire appropriately sized, locally sourced trees from a local native plant nursery that implements Phytophthora/Clean Nursery Stock protocols. This may reduce the probability of introducing trees contaminated with pests, diseases, and pathogens that could spread and infect native oak trees or habitats. Seeds should originate from trees of the same species (i.e., Genus, species, subspecies, and variety) as the species impacted. A Native Tree Planting Plan should be provided to the City prior to any ground-disturbing activities impacting trees and/or tree removal.</p>		
<p>BIO-13- Oak trees/Oak woodland</p>	<p>Prior to any Project ground-disturbing activities, the City/project proponent shall determine:</p> <ol style="list-style-type: none"> 1) An inventory of all oak trees removed or encroached upon during project activities, separated by species and DBH; 2) Acres of oak woodlands impacted and density, coverage, and abundance of understory vegetation species impacted by life form (i.e., grass, forb, shrub, subshrub, vine); 3) Mitigation ratios if the loss of any oaks are anticipated and total number and/or area of replacement trees and vegetation. The mitigation site shall mimic the pre-Project percent basal, canopy, and vegetation cover of oak woodland impacted. Associated understory and early successional native species shall be planted and monitored along with trees to achieve viable habitat and adequately compensate for biological functions lost; 4) Location of restoration areas and a discussion of the adequacy of the location(s) to serve as mitigation (e.g., would support oak trees/oak woodlands; avoid habitat type conversion); 5) The location and assessment of appropriate reference site(s) to inform the appropriate planting rate to recreate the pre-Project function, density, percent basal, canopy, and 	<p>Prior to water diversion construction and activities</p>	<p>Project-level lead agency</p>

Michael Klein
 City of Calabasas
 September 13, 2021
 Page 23 of 26

	<p>vegetation cover of oak woodland impacted;</p> <p>6) Scientific [Genus and species (subspecies/variety if applicable)] of all plants being used for restoration;</p> <p>7) Location(s) of propagule source. Propagules shall be collected or grown from on-site sources or adjacent areas within the same watershed and shall not be purchased from a supplier. Seeds must originate from plants/trees of the same species (i.e., Genus, species, subspecies, and variety) as the species impacted and;</p> <p>8) Species-specific planting methods (i.e., container or bulbs).</p>		
<p>MM-BIO-14-Tree Diseases, Pests, and Pathogens</p>	<p>The spread of invasive pests and diseases shall be mitigated by implementing the following:</p> <p>1) Prior to tree removal, a certified arborist shall evaluate trees for infectious tree diseases including but not limited to: sudden oak death (<i>Phytophthora ramorum</i>), thousand canker fungus (<i>Geosmithia morbida</i>), polyphagous shot hole borer (<i>Euwallacea</i> spp.), and goldspotted oak borer (<i>Agrilus auroguttatus</i>);</p> <p>2) If a certified arborist determines trees are impacted by infectious pests or diseases, the certified arborist shall prepare an Infectious Tree Disease Management Plan or develop a detailed, robust, enforceable, and feasible list of preventative measures. A plan/list shall provide measures relevant for each tree pest or disease observed. To avoid the spread of infectious tree pests and diseases, infected trees shall not be transported from a project area without first being treated using best available management practices described Infectious Tree Disease Management Plan or list of preventative measures.</p> <p>3) If possible, all tree material, especially infected tree material, shall be left on site. The material could be chipped for use as ground cover or mulch. Pruning and power tools shall be cleaned and disinfected before use to prevent</p>	<p>Prior to/During project construction activities</p>	<p>Project-level lead agency</p>

Michael Klein
 City of Calabasas
 September 13, 2021
 Page 24 of 26

	introducing pathogens from known infested areas, and after use to prevent spread of pathogens to new areas.		
REC-3-In-lieu Fees	<p>CDFW recommends the subsequent environmental document provide adequate, complete, and good-faith disclosure of information that would address the following in relation to the Project:</p> <ol style="list-style-type: none"> 1) Whether the in-lieu fee is going towards an established program; 2) How the program is designed to (and will) mitigate the effects at issue at a level meaningful for purposes of CEQA; 3) What the in-lieu fee would acquire; 4) What biological resources would the in-lieu fee protect/conservate; 5) Why the in-lieu fee is appropriate for mitigating the cumulative loss of biological resources; 6) Why the in-lieu fee is sufficient to purchase land or credits at a mitigation bank; 7) Where the project proponent may acquire land or purchase credits at a mitigation bank; 8) When the project proponent would use the in-lieu fee; and, 9) How the in-lieu fee would be adequate such that no impacts would occur as a result of the Project. <p>The project proponent shall provide any technical data, maps, plot plans, diagrams, and similar relevant information in addressing these concerns (CEQA Guidelines, § 15147).</p>	Prior to finalizing EIR	City of Calabasas
REC-4-In-lieu Fees	<p>CDFW recommends that the project proponent provide a discussion describing how it intends to commit to mitigation via the in-lieu fee. For example, the project proponent shall provide specifics as to when would the project proponent require payment from the project applicant, how long would the project applicant have to pay the fee, what mechanisms would the project proponent</p>	Prior to finalizing EIR	City of Calabasas

Michael Klein
 City of Calabasas
 September 13, 2021
 Page 25 of 26

	implement to ensure the fee is paid, and when the project proponent would use the project's payment for mitigation. Also, the project proponent shall provide specific performance standards and actions to achieve those performance standards.		
REC-5-In-lieu Fees	CDFW recommends that the project proponent recirculate the DPEIR for more meaningful public review and assessment of the project proponent's in-lieu fee. Additionally, the Project proponent shall recirculate the DPEIR if the proposed mitigation measure (i.e., in-lieu fee) would not reduce potential effects to less than significant and new measures must be required [CEQA Guidelines, § 15073.5(b)(2)].	Prior to finalizing EIR	City of Calabasas
REC-6-Nesting Birds	CDFW recommends avoiding any construction activity during nesting season. If not feasible, CDFW recommends modifying MM BIO-2 by expanding the time period for bird and raptor nesting from February 1 through August 31 to January 1 through September 15. If the Project occurs between January 1 through September 15, a nesting bird and raptor survey shall be conducted as stated in MM BIO-2, prior to any ground-disturbing activities (e.g., staging, mobilization, grading) as well as prior to any vegetation removal within the Project site.	Prior to finalizing EIR /During/After project	City of Calabasas/project-level lead agency
REC-7-Restoration Plans Final Report	<u>Restoration Plans Final Report.</u> MM BIO-5 states, "Five years after project start, a final report shall be submitted to the City and the CDFW, which shall at a minimum discuss the implementation, monitoring and management of the mitigation project over the five-year period, and indicate whether the Restoration Plan has met the established success criteria." While CDFW agrees that a final report shall be submitted to determine success, five years after the start of the project rather than the start of the restoration may not be sufficient time to determine success. CDFW recommends amending the language by excluding the strikethrough and including the <u>underlined</u> language as follows: "Five years after project start the <u>start of restoration activities</u> , a final report shall be submitted to the City and	Prior to finalizing EIR /During/After project	City of Calabasas/project-level lead agency

Michael Klein
 City of Calabasas
 September 13, 2021
 Page 26 of 26

	the CDFW, which shall at a minimum discuss the implementation, monitoring and management of the mitigation project over the five-year period, and indicate whether the Restoration Plan has met the established success criteria. [...]"		
REC-8-Rodenticides	CDFW recommends TVMWD exclude the use of second-generation anticoagulant rodenticides for all subsequent individual projects.	Prior to finalizing EIR /During/After project	City of Calabasas/project-level lead agency
REC-9-Data	Project-level lead agencies shall ensure sensitive and special status species data has been properly submitted to the California Natural Diversity Database with all data fields applicable filled out. Confirmation of data submittal shall be provided to CDFW.	Prior to finalizing/adopting project-level CEQA document	Project-level lead agency
REC-10-Mitigation and Monitoring Reporting Plan	TVMWD shall update the Project's proposed Biological Resources Mitigation Measures and condition the environmental document to include mitigation measures recommended in this letter. TVMWD is welcome to coordinate with CDFW to further review and refine the Project's mitigation measures.	Prior to finalizing EIR	City of Calabasas

COMMUNITY DEVELOPMENT

SEP 07 2021

Dear Mr. Klein:

NOTICE OF AVAILABILITY OF A DRAFT ENVIRONMENTAL IMPACT REPORT, "CITY OF CALABASAS 2021-2029 HOUSING ELEMENT UPDATE," CONSISTS OF A COMPREHENSIVE UPDATE TO THE HOUSING ELEMENT AND RELATED UPDATES TO THE LAND USE ELEMENT AND LAND USE MAP OF THE CITY OF CALABASAS' GENERAL PLAN, THE PROJECT ALSO INCLUDES UPDATES TO THE SAFETY ELEMENT AND CIRCULATION ELEMENT IN COMPLIANCE WITH NEW STATE RULES, CALABASAS, FFER 2021008337

The Notice of Availability of a Draft Environmental Impact Report has been reviewed by the Planning Division, Land Development Unit, Forestry Division, and Health Hazardous Materials Division of the County of Los Angeles Fire Department.

The following are their comments:

PLANNING DIVISION:

LACFD operates 174 fire stations and serves approximately 4.1 million residents, 1.3 million housing units, 59 cities, and unincorporated communities. As of 2019, LACFD employed 5,901 personnel:

- 1,419 firefighters
- 933 administrative support
- 806 firefighter specialists
- 726 firefighter paramedics

SERVING THE UNINCORPORATED AREAS OF LOS ANGELES COUNTY AND THE CITIES OF:

WHITTIER

- 692 captains
- 600 seasonally recurrent lifeguards
- 166 lifeguards
- 114 fire suppression aides
- 108 chief officers
- 107 hazardous materials specialists
- 97 dispatchers
- 74 call firefighters
- 45 foresters
- 14 pilots

In 2019, LACFD responded to nearly 399,000 incidents: approximately 7,100 fire incidents, 334,000 emergency medical incidents, and 58,000 other incidents (false alarms, mutual aid, hazardous materials, and miscellaneous incidents) (LACFD 2020b). The City is served by both Station 68, located at 24130 Calabastas Road, and Station 125, located at 5215 Las Virgenes Road. Additionally, LACFD operates Station 67, located at 25801 Piuma Road, approximately 2.5 miles south of the Plan Area, and Station 69, located at 401 South Topanga Canyon Boulevard, approximately 2.9 miles southeast of the Plan Area. The City of Calabastas is further protected against fire hazards by the Mountains Recreation and Conservation Authority (MRCA) Fire Division. MRCA services more than 75,000 acres of parkland that is owned by the Santa Monica Mountains Conservancy, which are located in and near the Plan Area (MRCA 2021).

For any questions regarding this response, please contact Loretta Bagwell, Planning Analyst, at (323) 881-2404 or Loretta.Bagwell@fire.lacounty.gov.

LAND DEVELOPMENT UNIT:

ACCESS:

1. Fire Apparatus Access Roads must be installed and maintained in a serviceable manner prior to and during the time of construction. Fire Code 501.4.
2. All fire lanes shall be clear of all encroachments and shall be maintained in accordance with the Title 32, County of Los Angeles Fire Code.
3. The dimensions of the approved Fire Apparatus Access Roads shall be maintained as originally approved by the fire code official. Fire Code 503.2.2.1.
4. Provide a minimum unobstructed width of 20 feet, exclusive of shoulders and an unobstructed vertical clearance "clear to sky" Fire Department vehicular access to within 150 feet of all portions of the exterior walls of the first story of the building, as measured by an approved route around the exterior of the building. Fire Code 503.1.1 and 503.2.2.

5. Abrupt changes in grade shall not exceed the maximum angles of approach and departure for fire apparatus. The first 10 feet of any angle of approach or departure or break-over shall not exceed a 10 percent change or 5.7 degrees. Fire Code 503.2.8.
6. Indicate the various grade percentages and their lengths of the Fire Department access roadway on the site plan. Provide a road profile for proposed access roads with grades greater 15 percent.
7. Provide approved signs or other approved notices or markings that include the words "NO PARKING - FIRE LANE." Signs shall have a minimum dimension of 12 inches wide by 18 inches high and have red letters on a white reflective background. Signs shall be provided for Fire Apparatus Access Roads, to clearly indicate the entrance to such road, or prohibit the obstruction thereof and at intervals, as required by the Fire Inspector. Fire Code 503.3.
8. Clearly identify firefighter walkway access routes on the site plan. Indicate the slope and walking surface material. Clearly show the required width.
9. Fire Apparatus Access Roads shall not be obstructed in any manner, including by the parking of vehicles, or the use of traffic calming devices, including but not limited to, speed bumps or speed humps. The minimum widths and clearances established in Section 503.2.1 shall be maintained at all times. Fire Code 503.4.
10. Traffic Calming Devices, including but not limited to, speed bumps and speed humps, shall be prohibited unless approved by the fire code official. Fire Code 503.4.1.
11. When security gates are provided, maintain a minimum access width of 20 feet. The security gate shall be provided with an approved means of emergency operation and shall be maintained operational at all times and replaced or repaired when defective. Electric gate operators, where provided, shall be listed in accordance with UL 325. Gates intended for automatic operation shall be designed, constructed, and installed to comply with the requirements of ASTM F220. Gates shall be of the swinging or sliding type. Construction of gates shall be of materials that allow manual operation by one person. Fire Code 503.6.
12. All locking devices shall comply with the County of Los Angeles Fire Department Regulation 5, Compliance for Installation of Emergency Access Devices.

WATER SYSTEM:

1. All fire hydrants shall measure 6"x 4"x 2-1/2" brass or bronze conforming to current AWWA standard C503 or approved equal and shall be installed in accordance with the County of Los Angeles Fire Department C105.1 CFC.
2. All required PUBLIC fire hydrants shall be installed, tested, and accepted prior to beginning construction. Fire Code 501.4.

3. The required fire flow for the PUBLIC fire hydrants for this project is 4,000 gpm at 20 pounds psi residual pressure for 4 hours. Three PUBLIC fire hydrant(s) flowing simultaneously may be used to achieve the required fire flow.
4. Provide a Form 195 signed and completed by the local water purveyor.
5. Show all existing PUBLIC fire hydrants to within 300' of all property lines. Provide the distance dimensions and show the location of each hydrant on the site plan.

Additional comments pending the information returned by the applicant for Fire Department plan check; presently all outstanding comments have been addressed via plan check.

For any questions regarding the report, please contact Joseph Youman at (323) 890-4243 or Joseph.Youman@fire.lacounty.gov.

FORESTRY DIVISION – OTHER ENVIRONMENTAL CONCERNS:

The statutory responsibilities of the County of Los Angeles Fire Department's Forestry Division include erosion control, watershed management, rare and endangered species, vegetation, fuel modification for Very High Fire Hazard Severity Zones, archeological and cultural resources, and the County Oak Tree Ordinance. Potential impacts in these areas should be addressed.

Under the Los Angeles County Oak tree Ordinance, a permit is required to cut, destroy, remove, relocate, inflict damage or encroach into the protected zone of any tree of the Oak genus which is 25 inches or more in circumference (eight inches in diameter), as measured 4 1/2 feet above mean natural grade.

If Oak trees are known to exist in the proposed project area further field studies should be conducted to determine the presence of this species on the project site.

The County of Los Angeles Fire Department's Forestry Division has no further comments regarding this project.

For any questions regarding this response, please contact Forestry Assistant, Nicholas Alegria at (818) 890-5719.

HEALTH HAZARDOUS MATERIALS DIVISION:

The Health Hazardous Materials Division of the Los Angeles County Fire Department has no comments or requirements for the project at this time.

Please contact HHMD senior typist-clerk, Perla Garcia at (323) 890-4035 or Perla.garcia@fire.lacounty.gov if you have any questions.

If you have any additional questions, please contact this office at (323) 890-4330.

Michael Klein, Senior Planner

Ref. DOC 6266953

Mr. Michael Klein, AICP, Senior Planner
Community Development Department
100 Civic Center Way
Calabasas, CA 91302

Dear Mr. Klein:

Response to DEIR for 2021-2029 Housing Element Update

The Los Angeles County Sanitation Districts (Districts) received a Notice of Availability of a Draft Environmental Impact Report (DEIR) for the subject project on August 2, 2021. The Districts operates the Calabasas Landfill, which is owned by the County of Los Angeles (County), within the project area. We offer the following comments:

1. **PUBLIC SERVICES AND RECREATION, Park Planning Efforts**, *page 4.12-8*, third bullet point and **UTILITIES AND SERVICE SYSTEMS, Solid Waste Collection and Disposal**, *page 4.14-8*, first paragraph: The Calabasas Landfill site and monitoring easements together consist of 505 acres.
2. **PUBLIC SERVICES AND RECREATION, Park Planning Efforts**, *page 4.12-8*, third bullet point; and **UTILITIES AND SERVICE SYSTEMS, Solid Waste Collection and Disposal**, *page 4.14-8*, second paragraph; *page 4.14-30*, Impact UTIL-4; and *page 4.14-34*, second paragraph: While the estimated date of closure was 2042 during the 2016 CalRecycle Solid Waste Facility Permit (SWFP) revision process, the Calabasas Landfill is currently estimated to close between 2032 and 2038, as described in the paragraph below. It should be noted that the remaining life of the landfill is dependent on the rate of disposal and airspace utilization factor, which are variable. Specifically, the airspace utilization factor is dependent on operational practices, rate of refuse settlement, and other factors.

The Districts is currently working with the County's Department of Regional Planning (Regional Planning) to obtain approval for a revised final fill plan that will allow a portion of previously stockpiled soil that is not needed for operations to remain in place. In December 2020, Regional Planning issued a waiver that allows the site to continue to operate while some of this soil stockpile at higher elevations is removed through normal landfill operations. Once the top of the soil stockpile is removed (estimated to be complete by December 2024), it is anticipated that Regional Planning will approve the revised final fill plan. According to preliminary calculations, the landfill is estimated to close between 2032 and 2038 based on the revised final fill plan. If the revised final fill plan is not approved by Regional Planning, the remaining site life will be significantly reduced, possibility requiring immediate closure of the landfill.

3. **UTILITIES AND SERVICE SYSTEMS, Solid Waste Collection and Disposal**, *page 4.14-8*, first paragraph stated that "most solid waste in Calabasas is transported to and disposed of at the Calabasas Sanitary Landfill, which is a Class III facility owned and operated by the County of Los Angeles Sanitation District." To be clear, the Calabasas Landfill is owned by the County of Los Angeles and operated by the Districts under the terms of a Joint Powers Agreement. Please note that the Districts is a partnership of 24 independent special districts and not part of County governance.

4. **UTILITIES AND SERVICE SYSTEMS, Solid Waste Collection and Disposal**, *page 4.14-8*, first paragraph also stated that “the landfill accepts construction/demolition, industrial, mixed municipal, tires, and green material waste from the cities of Calabasas, Agoura Hills, Malibu, Thousand Oaks, and Westlake Village....” In addition to the cities listed, the landfill serves the city of Hidden Hills.

If you have any questions, please contact the undersigned at (562) 908-4288, extension 2743 or at mandyng@lacs.org.

Very truly yours,

Mandy Ng

RE: Agenda Item No. 1: Recommendation of Certification of the Final Environmental Impact Report and Adoption of the 2021-2029 Housing Element Update and Associated Land Use Element Updates to the Calabasas 2030 General Plan

Dear Commissioners,

On behalf of the Southwest Regional Council of Carpenters (“**Commenter**” or “**Carpenter**”), my Office is submitting these comments on Agenda Item No. 1 regarding the City of Calabasas’ (“**City**”) certification of a Final Environmental Impact Report and adoption of the 2021-2029 Housing Element Update and associated Land Use Element updates to the Calabasas 2030 General Plan (“**Project**”).

The Southwest Carpenters is a labor union representing more than 50,000 union carpenters in six states and has a strong interest in well ordered land use planning and addressing the environmental impacts of development projects.

Individual members of the Southwest Carpenters live, work and recreate in the City and surrounding communities and would be directly affected by the Project’s environmental impacts.

Commenters expressly reserves the right to supplement these comments at or prior to hearings on the Project, and at any later hearings and proceedings related to this Project. Cal. Gov. Code § 65009(b); Cal. Pub. Res. Code § 21177(a); *Bakersfield Citizens*

Commenters incorporates by reference all comments raising issues regarding the EIR submitted prior to certification of the EIR for the Project. *Citizens for Clean Energy v City of Woodland* (2014) 225 Cal. App. 4th 173, 191 (finding that any party who has objected to the Project’s environmental documentation may assert any issue timely raised by other parties).

Moreover, Commenter requests that the Lead Agency provide notice for any and all notices referring or related to the Project issued under the California Environmental Quality Act (“**CEQA**”), Cal Public Resources Code (“**PRC**”) § 21000 *et seq.*, and the California Planning and Zoning Law (“**Planning and Zoning Law**”), Cal. Gov’t Code §§ 65000–65010. California Public Resources Code Sections 21092.2, and 21167(f) and Government Code Section 65092 require agencies to mail such notices to any person who has filed a written request for them with the clerk of the agency’s governing body.

The City should require the use of a local skilled and trained workforce to benefit the community’s economic development and environment. The City should require the use of workers who have graduated from a Joint Labor Management apprenticeship training program approved by the State of California, or have at least as many hours of on-the-job experience in the applicable craft which would be required to graduate from such a state approved apprenticeship training program or who are registered apprentices in an apprenticeship training program approved by the State of California.

Community benefits such as local hire and skilled and trained workforce requirements can also be helpful to reduce environmental impacts and improve the positive economic impact of the Project. Local hire provisions requiring that a certain percentage of workers reside within 10 miles or less of the Project Site can reduce the length of vendor trips, reduce greenhouse gas emissions and providing localized economic benefits. Local hire provisions requiring that a certain percentage of workers

reside within 10 miles or less of the Project Site can reduce the length of vendor trips, reduce greenhouse gas emissions and providing localized economic benefits. As environmental consultants Matt Hagemann and Paul E. Rosenfeld note:

[A]ny local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

March 8, 2021 SWAPE Letter to Mitchell M. Tsai re Local Hire Requirements and Considerations for Greenhouse Gas Modeling.

Skilled and trained workforce requirements promote the development of skilled trades that yield sustainable economic development. As the California Workforce Development Board and the UC Berkeley Center for Labor Research and Education concluded:

. . . labor should be considered an investment rather than a cost – and investments in growing, diversifying, and upskilling California’s workforce can positively affect returns on climate mitigation efforts. In other words, well trained workers are key to delivering emissions reductions and moving California closer to its climate targets.¹

Local skilled and trained workforce requirements and policies have significant environmental benefits since they improve an area’s jobs-housing balance, decreasing the amount of and length of job commutes and their associated greenhouse gas emissions. Recently, on May 7, 2021, the South Coast Air Quality Management District found that that the “[u]se of a local state-certified apprenticeship program or a skilled and trained workforce with a local hire component” can result in air pollutant reductions.²

¹ California Workforce Development Board (2020) Putting California on the High Road: A Jobs and Climate Action Plan for 2030 at p. ii, *available at* <https://laborcenter.berkeley.edu/wp-content/uploads/2020/09/Putting-California-on-the-High-Road.pdf>

² South Coast Air Quality Management District (May 7, 2021) Certify Final Environmental Assessment and Adopt Proposed Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions Program, and Proposed Rule 316 – Fees for Rule 2305, Submit Rule 2305 for Inclusion Into the SIP, and Approve

Cities are increasingly adopting local skilled and trained workforce policies and requirements into general plans and municipal codes. For example, the City of Hayward 2040 General Plan requires the City to “promote local hiring . . . to help achieve a more positive jobs-housing balance, and reduce regional commuting, gas consumption, and greenhouse gas emissions.”³

In fact, the City of Hayward has gone as far as to adopt a Skilled Labor Force policy into its Downtown Specific Plan and municipal code, requiring developments in its Downtown area to requiring that the City “c]ontribute to the stabilization of regional construction markets by spurring applicants of housing and nonresidential developments to require contractors to utilize apprentices from state-approved, joint labor-management training programs, . . .”⁴ In addition, the City of Hayward requires all projects 30,000 square feet or larger to “utilize apprentices from state-approved, joint labor-management training programs.”⁵

Locating jobs closer to residential areas can have significant environmental benefits. . . As the California Planning Roundtable noted in 2008:

People who live and work in the same jurisdiction would be more likely to take transit, walk, or bicycle to work than residents of less balanced communities and their vehicle trips would be shorter. Benefits would include potential reductions in both vehicle miles traveled and vehicle hours traveled.⁶

In addition, local hire mandates as well as skill training are critical facets of a strategy to reduce vehicle miles traveled. As planning experts Robert Cervero and Michael Duncan noted, simply placing jobs near housing stock is insufficient to achieve VMT reductions since the skill requirements of available local jobs must be matched to

⁶ California Planning Roundtable (2008) Deconstructing Jobs-Housing Balance at p. 6, *available at* <https://cproundtable.org/static/media/uploads/publications/cpr-jobs-housing.pdf>

those held by local residents.⁷ Some municipalities have tied local hire and skilled and trained workforce policies to local development permits to address transportation issues. As Cervero and Duncan note:

In nearly built-out Berkeley, CA, the approach to balancing jobs and housing is to create local jobs rather than to develop new housing.” The city’s First Source program encourages businesses to hire local residents, especially for entry- and intermediate-level jobs, and sponsors vocational training to ensure residents are employment-ready. While the program is voluntary, some 300 businesses have used it to date, placing more than 3,000 city residents in local jobs since it was launched in 1986. When needed, these carrots are matched by sticks, since the city is not shy about negotiating corporate participation in First Source as a condition of approval for development permits.

The City should consider utilizing skilled and trained workforce policies and requirements to benefit the local area economically and mitigate greenhouse gas, air quality and transportation impacts.

Sincerely,

Mitchell M. Tsai

Subject: Local Hire Requirements and Considerations for Greenhouse Gas Modeling

Dear Mr. Tsai,

Soil Water Air Protection Enterprise (“SWAPE”) is pleased to provide the following draft technical report explaining the significance of worker trips required for construction of land use development projects with respect to the estimation of greenhouse gas (“GHG”) emissions. The report will also discuss the potential for local hire requirements to reduce the length of worker trips, and consequently, reduced or mitigate the potential GHG impacts.

Worker Trips and Greenhouse Gas Calculations

The California Emissions Estimator Model (“CalEEMod”) is a “statewide land use emissions computer model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify potential criteria pollutant and greenhouse gas (GHG) emissions associated with both construction and operations from a variety of land use projects.”¹ CalEEMod quantifies construction-related emissions associated with land use projects resulting from off-road construction equipment; on-road mobile equipment associated with workers, vendors, and hauling; fugitive dust associated with grading, demolition, truck loading, and on-road vehicles traveling along paved and unpaved roads; and architectural coating activities; and paving.²

The number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.³

¹ “California Emissions Estimator Model.” CAPCOA, 2017, available at: <http://www.aqmd.gov/caleemod/home>.

² “California Emissions Estimator Model.” CAPCOA, 2017, available at: <http://www.aqmd.gov/caleemod/home>.

³ “CalEEMod User’s Guide.” CAPCOA, November 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.

Specifically, the number and length of vehicle trips is utilized to estimate the vehicle miles travelled (“VMT”) associated with construction. Then, utilizing vehicle-class specific EMFAC 2014 emission factors, CalEEMod calculates the vehicle exhaust, evaporative, and dust emissions resulting from construction-related VMT, including personal vehicles for worker commuting.⁴

Specifically, in order to calculate VMT, CalEEMod multiplies the average daily trip rate by the average overall trip length (see excerpt below):

$$\text{“VMT}_d = \Sigma(\text{Average Daily Trip Rate}_i * \text{Average Overall Trip Length}_i)_n$$

Where:

n = Number of land uses being modeled.”⁵

Furthermore, to calculate the on-road emissions associated with worker trips, CalEEMod utilizes the following equation (see excerpt below):

$$\text{“Emissions}_{\text{pollutant}} = \text{VMT} * \text{EF}_{\text{running,pollutant}}$$

Where:

$\text{Emissions}_{\text{pollutant}}$ = emissions from vehicle running for each pollutant

VMT = vehicle miles traveled

$\text{EF}_{\text{running,pollutant}}$ = emission factor for running emissions.”⁶

Thus, there is a direct relationship between trip length and VMT, as well as a direct relationship between VMT and vehicle running emissions. In other words, when the trip length is increased, the VMT and vehicle running emissions increase as a result. Thus, vehicle running emissions can be reduced by decreasing the average overall trip length, by way of a local hire requirement or otherwise.

Default Worker Trip Parameters and Potential Local Hire Requirements

As previously discussed, the number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.⁷ In order to understand how local hire requirements and associated worker trip length reductions impact GHG emissions calculations, it is important to consider the CalEEMod default worker trip parameters. CalEEMod provides recommended default values based on site-specific information, such as land use type, meteorological data, total lot acreage, project type and typical equipment associated with project type. If more specific project information is known, the user can change the default values and input project-specific values, but the California Environmental Quality Act (“CEQA”) requires that such changes be justified by substantial evidence.⁸ The default number of construction-related worker trips is calculated by multiplying the

⁵ “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 23.

⁶ “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 15.

⁷ “CalEEMod User’s Guide.” CAPCOA, November 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.

⁸ CalEEMod User Guide, available at: <http://www.caleemod.com/>, p. 1, 9.

number of pieces of equipment for all phases by 1.25, with the exception of worker trips required for the building construction and architectural coating phases.⁹ Furthermore, the worker trip vehicle class is a 50/25/25 percent mix of light duty autos, light duty truck class 1 and light duty truck class 2, respectively.”¹⁰ Finally, the default worker trip length is consistent with the length of the operational home-to-work vehicle trips.¹¹ The operational home-to-work vehicle trip lengths are:

“[B]ased on the *location* and *urbanization* selected on the project characteristic screen. These values were *supplied by the air districts or use a default average for the state*. Each district (or county) also assigns trip lengths for urban and rural settings” (emphasis added).¹²

Thus, the default worker trip length is based on the location and urbanization level selected by the User when modeling emissions. The below table shows the CalEEMod default rural and urban worker trip lengths by air basin (see excerpt below and Attachment A).¹³

Worker Trip Length by Air Basin		
Air Basin	Rural (miles)	Urban (miles)
Great Basin Valleys	16.8	10.8
Lake County	16.8	10.8
Lake Tahoe	16.8	10.8
Mojave Desert	16.8	10.8
Mountain Counties	16.8	10.8
North Central Coast	17.1	12.3
North Coast	16.8	10.8
Northeast Plateau	16.8	10.8
Sacramento Valley	16.8	10.8
Salton Sea	14.6	11
San Diego	16.8	10.8
San Francisco Bay Area	10.8	10.8
San Joaquin Valley	16.8	10.8
South Central Coast	16.8	10.8
South Coast	19.8	14.7
Average	16.47	11.17
Minimum	10.80	10.80
Maximum	19.80	14.70
Range	9.00	3.90

⁹ “CalEEMod User’s Guide.” CAPCOA, November 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.

¹⁰ “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 15.

¹¹ “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 14.

¹² “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 21.

¹³ “Appendix D Default Data Tables.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/05_appendix-d2016-3-2.pdf?sfvrsn=4, p. D-84 – D-86.

As demonstrated above, default rural worker trip lengths for air basins in California vary from 10.8- to 19.8- miles, with an average of 16.47 miles. Furthermore, default urban worker trip lengths vary from 10.8- to 14.7- miles, with an average of 11.17 miles. Thus, while default worker trip lengths vary by location, default urban worker trip lengths tend to be shorter in length. Based on these trends evident in the CalEEMod default worker trip lengths, we can reasonably assume that the efficacy of a local hire requirement is especially dependent upon the urbanization of the project site, as well as the project location.

Practical Application of a Local Hire Requirement and Associated Impact

To provide an example of the potential impact of a local hire provision on construction-related GHG emissions, we estimated the significance of a local hire provision for the Village South Specific Plan (“Project”) located in the City of Claremont (“City”). The Project proposed to construct 1,000 residential units, 100,000-SF of retail space, 45,000-SF of office space, as well as a 50-room hotel, on the 24-acre site. The Project location is classified as Urban and lies within the Los Angeles-South Coast County. As a result, the Project has a default worker trip length of 14.7 miles.¹⁴ In an effort to evaluate the potential for a local hire provision to reduce the Project’s construction-related GHG emissions, we prepared an updated model, reducing all worker trip lengths to 10 miles (see Attachment B). Our analysis estimates that if a local hire provision with a 10-mile radius were to be implemented, the GHG emissions associated with Project construction would decrease by approximately 17% (see table below and Attachment C).

Local Hire Provision Net Change	
Without Local Hire Provision	
Total Construction GHG Emissions (MT CO ₂ e)	3,623
Amortized Construction GHG Emissions (MT CO ₂ e/year)	120.77
With Local Hire Provision	
Total Construction GHG Emissions (MT CO ₂ e)	3,024
Amortized Construction GHG Emissions (MT CO ₂ e/year)	100.80
% Decrease in Construction-related GHG Emissions	17%

As demonstrated above, by implementing a local hire provision requiring 10 mile worker trip lengths, the Project could reduce potential GHG emissions associated with construction worker trips. More broadly, any local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

This serves as an example of the potential impacts of local hire requirements on estimated project-level GHG emissions, though it does not indicate that local hire requirements would result in reduced construction-related GHG emission for all projects. As previously described, the significance of a local hire requirement depends on the worker trip length enforced and the default worker trip length for the project’s urbanization level and location.

¹⁴ “Appendix D Default Data Tables.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/05_appendix-d2016-3-2.pdf?sfvrsn=4, p. D-85.

Paul Rosenfeld, Ph.D.

Principal Environmental Chemist

Chemical Fate and Transport & Air Dispersion Modeling

Risk Assessment & Remediation Specialist

Education

Ph.D. Soil Chemistry, University of Washington, 1999. Dissertation on volatile organic compound filtration.

M.S. Environmental Science, U.C. Berkeley, 1995. Thesis on organic waste economics.

B.A. Environmental Studies, U.C. Santa Barbara, 1991. Thesis on wastewater treatment.

Professional Experience

Dr. Rosenfeld has over 25 years' experience conducting environmental investigations and risk assessments for evaluating impacts to human health, property, and ecological receptors. His expertise focuses on the fate and transport of environmental contaminants, human health risk, exposure assessment, and ecological restoration. Dr. Rosenfeld has evaluated and modeled emissions from unconventional oil drilling operations, oil spills, landfills, boilers and incinerators, process stacks, storage tanks, confined animal feeding operations, and many other industrial and agricultural sources. His project experience ranges from monitoring and modeling of pollution sources to evaluating impacts of pollution on workers at industrial facilities and residents in surrounding communities.

Dr. Rosenfeld has investigated and designed remediation programs and risk assessments for contaminated sites containing lead, heavy metals, mold, bacteria, particulate matter, petroleum hydrocarbons, chlorinated solvents, pesticides, radioactive waste, dioxins and furans, semi- and volatile organic compounds, PCBs, PAHs, perchlorate, asbestos, per- and poly-fluoroalkyl substances (PFOA/PFOS), unusual polymers, fuel oxygenates (MTBE), among other pollutants. Dr. Rosenfeld also has experience evaluating greenhouse gas emissions from various projects and is an expert on the assessment of odors from industrial and agricultural sites, as well as the evaluation of odor nuisance impacts and technologies for abatement of odorous emissions. As a principal scientist at SWAPE, Dr. Rosenfeld directs air dispersion modeling and exposure assessments. He has served as an expert witness and testified about pollution sources causing nuisance and/or personal injury at dozens of sites and has testified as an expert witness on more than ten cases involving exposure to air contaminants from industrial sources.

Presentations:

Rosenfeld, P.E., Sutherland, A; Hesse, R.; Zapata, A. (October 3-6, 2013). Air dispersion modeling of volatile organic emissions from multiple natural gas wells in Decatur, TX. *44th Western Regional Meeting, American Chemical Society*. Lecture conducted from Santa Clara, CA.

Sok, H.L.; Waller, C.C.; Feng, L.; Gonzalez, J.; Sutherland, A.J.; Wisdom-Stack, T.; Sahai, R.K.; Hesse, R.C.; **Rosenfeld, P.E.** (June 20-23, 2010). Atrazine: A Persistent Pesticide in Urban Drinking Water. *Urban Environmental Pollution*. Lecture conducted from Boston, MA.

Feng, L.; Gonzalez, J.; Sok, H.L.; Sutherland, A.J.; Waller, C.C.; Wisdom-Stack, T.; Sahai, R.K.; La, M.; Hesse, R.C.; **Rosenfeld, P.E.** (June 20-23, 2010). Bringing Environmental Justice to East St. Louis, Illinois. *Urban Environmental Pollution*. Lecture conducted from Boston, MA.

Rosenfeld, P.E. (April 19-23, 2009). Perfluorooctanoic Acid (PFOA) and Perfluorooctane Sulfonate (PFOS) Contamination in Drinking Water From the Use of Aqueous Film Forming Foams (AFFF) at Airports in the United States. *2009 Ground Water Summit and 2009 Ground Water Protection Council Spring Meeting*, Lecture conducted from Tuscon, AZ.

Rosenfeld, P.E. (April 19-23, 2009). Cost to Filter Atrazine Contamination from Drinking Water in the United States” Contamination in Drinking Water From the Use of Aqueous Film Forming Foams (AFFF) at Airports in the United States. *2009 Ground Water Summit and 2009 Ground Water Protection Council Spring Meeting*. Lecture conducted from Tuscon, AZ.

Wu, C., Tam, L., Clark, J., **Rosenfeld, P.** (20-22 July, 2009). Dioxin and furan blood lipid concentrations in populations living near four wood treatment facilities in the United States. Brebbia, C.A. and Popov, V., eds., *Air Pollution XVII: Proceedings of the Seventeenth International Conference on Modeling, Monitoring and Management of Air Pollution*. Lecture conducted from Tallinn, Estonia.

Rosenfeld, P. E. (October 15-18, 2007). Moss Point Community Exposure To Contaminants From A Releasing Facility. *The 23rd Annual International Conferences on Soils Sediment and Water*. Platform lecture conducted from University of Massachusetts, Amherst MA.

Rosenfeld, P. E. (October 15-18, 2007). The Repeated Trespass of Tritium-Contaminated Water Into A Surrounding Community Form Repeated Waste Spills From A Nuclear Power Plant. *The 23rd Annual International Conferences on Soils Sediment and Water*. Platform lecture conducted from University of Massachusetts, Amherst MA.

Rosenfeld, P. E. (October 15-18, 2007). Somerville Community Exposure To Contaminants From Wood Treatment Facility Emissions. The *23rd Annual International Conferences on Soils Sediment and Water*. Lecture conducted from University of Massachusetts, Amherst MA.

Rosenfeld P. E. (March 2007). Production, Chemical Properties, Toxicology, & Treatment Case Studies of 1,2,3-Trichloropropane (TCP). *The Association for Environmental Health and Sciences (AEHS) Annual Meeting*. Lecture conducted from San Diego, CA.

Rosenfeld P. E. (March 2007). Blood and Attic Sampling for Dioxin/Furan, PAH, and Metal Exposure in Florida, Alabama. *The AEHS Annual Meeting*. Lecture conducted from San Diego, CA.

Hensley A.R., Scott, A., **Rosenfeld P.E.**, Clark, J.J.J. (August 21 – 25, 2006). Dioxin Containing Attic Dust And Human Blood Samples Collected Near A Former Wood Treatment Facility. *The 26th International Symposium on Halogenated Persistent Organic Pollutants – DIOXIN2006*. Lecture conducted from Radisson SAS Scandinavia Hotel in Oslo Norway.

Hensley A.R., Scott, A., **Rosenfeld P.E.**, Clark, J.J.J. (November 4-8, 2006). Dioxin Containing Attic Dust And Human Blood Samples Collected Near A Former Wood Treatment Facility. *APHA 134 Annual Meeting & Exposition*. Lecture conducted from Boston Massachusetts.

Paul Rosenfeld Ph.D. (October 24-25, 2005). Fate, Transport and Persistence of PFOA and Related Chemicals. Mealey's C8/PFOA. *Science, Risk & Litigation Conference*. Lecture conducted from The Rittenhouse Hotel, Philadelphia, PA.

Paul Rosenfeld Ph.D. (September 19, 2005). Brominated Flame Retardants in Groundwater: Pathways to Human Ingestion, *Toxicology and Remediation PEMA Emerging Contaminant Conference*. Lecture conducted from Hilton Hotel, Irvine California.

Paul Rosenfeld Ph.D. (September 19, 2005). Fate, Transport, Toxicity, And Persistence of 1,2,3-TCP. *PEMA Emerging Contaminant Conference*. Lecture conducted from Hilton Hotel in Irvine, California.

Paul Rosenfeld Ph.D. (September 26-27, 2005). Fate, Transport and Persistence of PDBEs. *Mealey's Groundwater Conference*. Lecture conducted from Ritz Carlton Hotel, Marina Del Ray, California.

Paul Rosenfeld Ph.D. (June 7-8, 2005). Fate, Transport and Persistence of PFOA and Related Chemicals. *International Society of Environmental Forensics: Focus On Emerging Contaminants*. Lecture conducted from Sheraton Oceanfront Hotel, Virginia Beach, Virginia.

Paul Rosenfeld Ph.D. (July 21-22, 2005). Fate Transport, Persistence and Toxicology of PFOA and Related Perfluorochemicals. *2005 National Groundwater Association Ground Water And Environmental Law Conference*. Lecture conducted from Wyndham Baltimore Inner Harbor, Baltimore Maryland.

Paul Rosenfeld Ph.D. (July 21-22, 2005). Brominated Flame Retardants in Groundwater: Pathways to Human Ingestion, Toxicology and Remediation. *2005 National Groundwater Association Ground Water and Environmental Law Conference*. Lecture conducted from Wyndham Baltimore Inner Harbor, Baltimore Maryland.

Paul Rosenfeld, Ph.D. and James Clark Ph.D. and Rob Hesse R.G. (May 5-6, 2004). Tert-butyl Alcohol Liability and Toxicology, A National Problem and Unquantified Liability. *National Groundwater Association. Environmental Law Conference*. Lecture conducted from Congress Plaza Hotel, Chicago Illinois.

Paul Rosenfeld, Ph.D. (March 2004). Perchlorate Toxicology. *Meeting of the American Groundwater Trust*. Lecture conducted from Phoenix Arizona.

Hagemann, M.F., **Paul Rosenfeld, Ph.D.** and Rob Hesse (2004). Perchlorate Contamination of the Colorado River. *Meeting of tribal representatives*. Lecture conducted from Parker, AZ.

Paul Rosenfeld, Ph.D. (April 7, 2004). A National Damage Assessment Model For PCE and Dry Cleaners. *Drycleaner Symposium. California Ground Water Association*. Lecture conducted from Radison Hotel, Sacramento, California.

Rosenfeld, P. E., Grey, M., (June 2003) Two stage biofilter for biosolids composting odor control. *Seventh International In Situ And On Site Bioremediation Symposium Battelle Conference* Orlando, FL.

Paul Rosenfeld, Ph.D. and James Clark Ph.D. (February 20-21, 2003) Understanding Historical Use, Chemical Properties, Toxicity and Regulatory Guidance of 1,4 Dioxane. *National Groundwater Association. Southwest Focus Conference. Water Supply and Emerging Contaminants..* Lecture conducted from Hyatt Regency Phoenix Arizona.

Paul Rosenfeld, Ph.D. (February 6-7, 2003). Underground Storage Tank Litigation and Remediation. *California CUPA Forum*. Lecture conducted from Marriott Hotel, Anaheim California.

Paul Rosenfeld, Ph.D. (October 23, 2002) Underground Storage Tank Litigation and Remediation. *EPA Underground Storage Tank Roundtable*. Lecture conducted from Sacramento California.

Rosenfeld, P.E. and Suffet, M. (October 7- 10, 2002). Understanding Odor from Compost, *Wastewater and Industrial Processes. Sixth Annual Symposium On Off Flavors in the Aquatic Environment. International Water Association*. Lecture conducted from Barcelona Spain.

Rosenfeld, P.E. and Suffet, M. (October 7- 10, 2002). Using High Carbon Wood Ash to Control Compost Odor. *Sixth Annual Symposium On Off Flavors in the Aquatic Environment. International Water Association*. Lecture conducted from Barcelona Spain.

Rosenfeld, P.E. and Grey, M. A. (September 22-24, 2002). Biocycle Composting For Coastal Sage Restoration. *Northwest Biosolids Management Association*. Lecture conducted from Vancouver Washington..

Rosenfeld, P.E. and Grey, M. A. (November 11-14, 2002). Using High-Carbon Wood Ash to Control Odor at a Green Materials Composting Facility. *Soil Science Society Annual Conference*. Lecture conducted from Indianapolis, Maryland.

Rosenfeld, P.E. (September 16, 2000). Two stage biofilter for biosolids composting odor control. *Water Environment Federation*. Lecture conducted from Anaheim California.

Rosenfeld, P.E. (October 16, 2000). Wood ash and biofilter control of compost odor. *Biofest*. Lecture conducted from Ocean Shores, California.

Rosenfeld, P.E. (2000). Bioremediation Using Organic Soil Amendments. *California Resource Recovery Association*. Lecture conducted from Sacramento California.

Rosenfeld, P.E., C.L. Henry, R. Harrison. (1998). Oat and Grass Seed Germination and Nitrogen and Sulfur Emissions Following Biosolids Incorporation With High-Carbon Wood-Ash. *Water Environment Federation 12th Annual Residuals and Biosolids Management Conference Proceedings*. Lecture conducted from Bellevue Washington.

Rosenfeld, P.E., C.L. Henry, R. Harrison. (1998). Comparison of Microbial Activity and Odor Emissions from Three Different Biosolids Applied to Forest Soil. *Brown and Caldwell*. Lecture conducted from Seattle Washington.

Rosenfeld, P.E., C.L. Henry. (1998). Characterization, Quantification, and Control of Odor Emissions from Biosolids Application To Forest Soil. *Biofest*. Lecture conducted from Lake Chelan, Washington.

Rosenfeld, P.E., C.L. Henry, R. Harrison. (1998). Oat and Grass Seed Germination and Nitrogen and Sulfur Emissions Following Biosolids Incorporation With High-Carbon Wood-Ash. Water Environment Federation 12th Annual Residuals and Biosolids Management Conference Proceedings. Lecture conducted from Bellevue Washington.

Rosenfeld, P.E., C.L. Henry, R. B. Harrison, and R. Dills. (1997). Comparison of Odor Emissions From Three Different Biosolids Applied to Forest Soil. *Soil Science Society of America*. Lecture conducted from Anaheim California.

Teaching Experience:

UCLA Department of Environmental Health (Summer 2003 through 2010) Taught Environmental Health Science 100 to students, including undergrad, medical doctors, public health professionals and nurses. Course focused on the health effects of environmental contaminants.

National Ground Water Association, Successful Remediation Technologies. Custom Course in Sante Fe, New Mexico. May 21, 2002. Focused on fate and transport of fuel contaminants associated with underground storage tanks.

National Ground Water Association; Successful Remediation Technologies Course in Chicago Illinois. April 1, 2002. Focused on fate and transport of contaminants associated with Superfund and RCRA sites.

California Integrated Waste Management Board, April and May, 2001. Alternative Landfill Caps Seminar in San Diego, Ventura, and San Francisco. Focused on both prescriptive and innovative landfill cover design.

UCLA Department of Environmental Engineering, February 5, 2002. Seminar on Successful Remediation Technologies focusing on Groundwater Remediation.

University Of Washington, Soil Science Program, Teaching Assistant for several courses including: Soil Chemistry, Organic Soil Amendments, and Soil Stability.

U.C. Berkeley, Environmental Science Program Teaching Assistant for Environmental Science 10.

Academic Grants Awarded:

California Integrated Waste Management Board. \$41,000 grant awarded to UCLA Institute of the Environment. Goal: To investigate effect of high carbon wood ash on volatile organic emissions from compost. 2001.

Synagro Technologies, Corona California: \$10,000 grant awarded to San Diego State University. Goal: investigate effect of biosolids for restoration and remediation of degraded coastal sage soils. 2000.

King County, Department of Research and Technology, Washington State. \$100,000 grant awarded to University of Washington: Goal: To investigate odor emissions from biosolids application and the effect of polymers and ash on VOC emissions. 1998.

Northwest Biosolids Management Association, Washington State. \$20,000 grant awarded to investigate effect of polymers and ash on VOC emissions from biosolids. 1997.

James River Corporation, Oregon: \$10,000 grant was awarded to investigate the success of genetically engineered Poplar trees with resistance to round-up. 1996.

United State Forest Service, Tahoe National Forest: \$15,000 grant was awarded to investigating fire ecology of the Tahoe National Forest. 1995.

Kellogg Foundation, Washington D.C. \$500 grant was awarded to construct a large anaerobic digester on St. Kitts in West Indies. 1993

Deposition and/or Trial Testimony:

- In the United States District Court For The District of New Jersey
Duarte et al, *Plaintiffs*, vs. United States Metals Refining Company et. al. *Defendant*.
Case No.: 2:17-cv-01624-ES-SCM
Rosenfeld Deposition. 6-7-2019
- In the United States District Court of Southern District of Texas Galveston Division
M/T Carla Maersk, *Plaintiffs*, vs. Conti 168., Schiffahrts-GMBH & Co. Bulker KG MS “Conti Perdido”
Defendant.
Case No.: 3:15-CV-00106 consolidated with 3:15-CV-00237
Rosenfeld Deposition. 5-9-2019
- In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica
Carole-Taddeo-Bates et al., vs. Ifran Khan et al., Defendants
Case No.: No. BC615636
Rosenfeld Deposition, 1-26-2019
- In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica
The San Gabriel Valley Council of Governments et al. vs El Adobe Apts. Inc. et al., Defendants
Case No.: No. BC646857
Rosenfeld Deposition, 10-6-2018; Trial 3-7-19
- In United States District Court For The District of Colorado
Bells et al. Plaintiff vs. The 3M Company et al., Defendants
Case: No 1:16-cv-02531-RBJ
Rosenfeld Deposition, 3-15-2018 and 4-3-2018
- In The District Court Of Regan County, Texas, 112th Judicial District
Phillip Bales et al., Plaintiff vs. Dow Agrosiences, LLC, et al., Defendants
Cause No 1923
Rosenfeld Deposition, 11-17-2017
- In The Superior Court of the State of California In And For The County Of Contra Costa
Simons et al., Plaintiffs vs. Chevron Corporation, et al., Defendants
Cause No C12-01481
Rosenfeld Deposition, 11-20-2017
- In The Circuit Court Of The Twentieth Judicial Circuit, St Clair County, Illinois
Martha Custer et al., Plaintiff vs. Cerro Flow Products, Inc., Defendants
Case No.: No. 0i9-L-2295
Rosenfeld Deposition, 8-23-2017
- In The Superior Court of the State of California, For The County of Los Angeles
Warrn Gilbert and Penny Gilber, Plaintiff vs. BMW of North America LLC
Case No.: LC102019 (c/w BC582154)
Rosenfeld Deposition, 8-16-2017, Trail 8-28-2018
- In the Northern District Court of Mississippi, Greenville Division
Brenda J. Cooper, et al., *Plaintiffs*, vs. Meritor Inc., et al., *Defendants*
Case Number: 4:16-cv-52-DMB-JVM
Rosenfeld Deposition: July 2017

In The Superior Court of the State of Washington, County of Snohomish
Michael Davis and Julie Davis et al., Plaintiff vs. Cedar Grove Composting Inc., Defendants
Case No.: No. 13-2-03987-5
Rosenfeld Deposition, February 2017
Trial, March 2017

In The Superior Court of the State of California, County of Alameda
Charles Spain., Plaintiff vs. Thermo Fisher Scientific, et al., Defendants
Case No.: RG14711115
Rosenfeld Deposition, September 2015

In The Iowa District Court In And For Poweshiek County
Russell D. Winburn, et al., Plaintiffs vs. Doug Hoksbergen, et al., Defendants
Case No.: LALA002187
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County
Jerry Dovico, et al., Plaintiffs vs. Valley View Sine LLC, et al., Defendants
Law No.: LALA105144 - Division A
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County
Doug Pauls, et al., et al., Plaintiffs vs. Richard Warren, et al., Defendants
Law No.: LALA105144 - Division A
Rosenfeld Deposition, August 2015

In The Circuit Court of Ohio County, West Virginia
Robert Andrews, et al. v. Antero, et al.
Civil Action NO. 14-C-30000
Rosenfeld Deposition, June 2015

In The Third Judicial District County of Dona Ana, New Mexico
Betty Gonzalez, et al. Plaintiffs vs. Del Oro Dairy, Del Oro Real Estate LLC, Jerry Settles and Deward
DeRuyter, Defendants
Rosenfeld Deposition: July 2015

In The Iowa District Court For Muscatine County
Laurie Freeman et. al. Plaintiffs vs. Grain Processing Corporation, Defendant
Case No 4980
Rosenfeld Deposition: May 2015

In the Circuit Court of the 17th Judicial Circuit, in and For Broward County, Florida
Walter Hinton, et. al. Plaintiff, vs. City of Fort Lauderdale, Florida, a Municipality, Defendant.
Case Number CACE07030358 (26)
Rosenfeld Deposition: December 2014

In the United States District Court Western District of Oklahoma
Tommy McCarty, et al., Plaintiffs, v. Oklahoma City Landfill, LLC d/b/a Southeast Oklahoma City
Landfill, et al. Defendants.
Case No. 5:12-cv-01152-C
Rosenfeld Deposition: July 2014

In the County Court of Dallas County Texas
Lisa Parr et al, *Plaintiff*, vs. Aruba et al, *Defendant*.
Case Number cc-11-01650-E
Rosenfeld Deposition: March and September 2013
Rosenfeld Trial: April 2014

In the Court of Common Pleas of Tuscarawas County Ohio
John Michael Abicht, et al., *Plaintiffs*, vs. Republic Services, Inc., et al., *Defendants*
Case Number: 2008 CT 10 0741 (Cons. w/ 2009 CV 10 0987)
Rosenfeld Deposition: October 2012

In the United States District Court of Southern District of Texas Galveston Division
Kyle Cannon, Eugene Donovan, Genaro Ramirez, Carol Sassler, and Harvey Walton, each Individually and on behalf of those similarly situated, *Plaintiffs*, vs. BP Products North America, Inc., *Defendant*.
Case 3:10-cv-00622
Rosenfeld Deposition: February 2012
Rosenfeld Trial: April 2013

In the Circuit Court of Baltimore County Maryland
Philip E. Cvach, II et al., *Plaintiffs* vs. Two Farms, Inc. d/b/a Royal Farms, Defendants
Case Number: 03-C-12-012487 OT
Rosenfeld Deposition: September 2013

Matthew F. Hagemann, P.G., C.Hg., QSD, QSP

**Geologic and Hydrogeologic Characterization
Industrial Stormwater Compliance
Investigation and Remediation Strategies
Litigation Support and Testifying Expert
CEQA Review**

Education:

M.S. Degree, Geology, California State University Los Angeles, Los Angeles, CA, 1984.

B.A. Degree, Geology, Humboldt State University, Arcata, CA, 1982.

Professional Certifications:

California Professional Geologist

California Certified Hydrogeologist

Qualified SWPPP Developer and Practitioner

Professional Experience:

Matt has 25 years of experience in environmental policy, assessment and remediation. He spent nine years with the U.S. EPA in the RCRA and Superfund programs and served as EPA's Senior Science Policy Advisor in the Western Regional Office where he identified emerging threats to groundwater from perchlorate and MTBE. While with EPA, Matt also served as a Senior Hydrogeologist in the oversight of the assessment of seven major military facilities undergoing base closure. He led numerous enforcement actions under provisions of the Resource Conservation and Recovery Act (RCRA) while also working with permit holders to improve hydrogeologic characterization and water quality monitoring.

Matt has worked closely with U.S. EPA legal counsel and the technical staff of several states in the application and enforcement of RCRA, Safe Drinking Water Act and Clean Water Act regulations. Matt has trained the technical staff in the States of California, Hawaii, Nevada, Arizona and the Territory of Guam in the conduct of investigations, groundwater fundamentals, and sampling techniques.

Positions Matt has held include:

- Founding Partner, Soil/Water/Air Protection Enterprise (SWAPE) (2003 – present);
- Geology Instructor, Golden West College, 2010 – 2014;
- Senior Environmental Analyst, Komex H2O Science, Inc. (2000 -- 2003);

- Executive Director, Orange Coast Watch (2001 – 2004);
- Senior Science Policy Advisor and Hydrogeologist, U.S. Environmental Protection Agency (1989–1998);
- Hydrogeologist, National Park Service, Water Resources Division (1998 – 2000);
- Adjunct Faculty Member, San Francisco State University, Department of Geosciences (1993 – 1998);
- Instructor, College of Marin, Department of Science (1990 – 1995);
- Geologist, U.S. Forest Service (1986 – 1998); and
- Geologist, Dames & Moore (1984 – 1986).

Senior Regulatory and Litigation Support Analyst:

With SWAPE, Matt’s responsibilities have included:

- Lead analyst and testifying expert in the review of over 100 environmental impact reports since 2003 under CEQA that identify significant issues with regard to hazardous waste, water resources, water quality, air quality, Valley Fever, greenhouse gas emissions, and geologic hazards. Make recommendations for additional mitigation measures to lead agencies at the local and county level to include additional characterization of health risks and implementation of protective measures to reduce worker exposure to hazards from toxins and Valley Fever.
- Stormwater analysis, sampling and best management practice evaluation at industrial facilities.
- Manager of a project to provide technical assistance to a community adjacent to a former Naval shipyard under a grant from the U.S. EPA.
- Technical assistance and litigation support for vapor intrusion concerns.
- Lead analyst and testifying expert in the review of environmental issues in license applications for large solar power plants before the California Energy Commission.
- Manager of a project to evaluate numerous formerly used military sites in the western U.S.
- Manager of a comprehensive evaluation of potential sources of perchlorate contamination in Southern California drinking water wells.
- Manager and designated expert for litigation support under provisions of Proposition 65 in the review of releases of gasoline to sources drinking water at major refineries and hundreds of gas stations throughout California.
- Expert witness on two cases involving MTBE litigation.
- Expert witness and litigation support on the impact of air toxins and hazards at a school.
- Expert witness in litigation at a former plywood plant.

With Komex H2O Science Inc., Matt’s duties included the following:

- Senior author of a report on the extent of perchlorate contamination that was used in testimony by the former U.S. EPA Administrator and General Counsel.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of MTBE use, research, and regulation.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of perchlorate use, research, and regulation.
- Senior researcher in a study that estimates nationwide costs for MTBE remediation and drinking water treatment, results of which were published in newspapers nationwide and in testimony against provisions of an energy bill that would limit liability for oil companies.
- Research to support litigation to restore drinking water supplies that have been contaminated by MTBE in California and New York.

- Expert witness testimony in a case of oil production-related contamination in Mississippi.
- Lead author for a multi-volume remedial investigation report for an operating school in Los Angeles that met strict regulatory requirements and rigorous deadlines.

- Development of strategic approaches for cleanup of contaminated sites in consultation with clients and regulators.

Executive Director:

As Executive Director with Orange Coast Watch, Matt led efforts to restore water quality at Orange County beaches from multiple sources of contamination including urban runoff and the discharge of wastewater. In reporting to a Board of Directors that included representatives from leading Orange County universities and businesses, Matt prepared issue papers in the areas of treatment and disinfection of wastewater and control of the discharge of grease to sewer systems. Matt actively participated in the development of countywide water quality permits for the control of urban runoff and permits for the discharge of wastewater. Matt worked with other nonprofits to protect and restore water quality, including Surfrider, Natural Resources Defense Council and Orange County CoastKeeper as well as with business institutions including the Orange County Business Council.

Hydrogeology:

As a Senior Hydrogeologist with the U.S. Environmental Protection Agency, Matt led investigations to characterize and cleanup closing military bases, including Mare Island Naval Shipyard, Hunters Point Naval Shipyard, Treasure Island Naval Station, Alameda Naval Station, Moffett Field, Mather Army Airfield, and Sacramento Army Depot. Specific activities were as follows:

- Led efforts to model groundwater flow and contaminant transport, ensured adequacy of monitoring networks, and assessed cleanup alternatives for contaminated sediment, soil, and groundwater.
- Initiated a regional program for evaluation of groundwater sampling practices and laboratory analysis at military bases.
- Identified emerging issues, wrote technical guidance, and assisted in policy and regulation development through work on four national U.S. EPA workgroups, including the Superfund Groundwater Technical Forum and the Federal Facilities Forum.

At the request of the State of Hawaii, Matt developed a methodology to determine the vulnerability of groundwater to contamination on the islands of Maui and Oahu. He used analytical models and a GIS to show zones of vulnerability, and the results were adopted and published by the State of Hawaii and County of Maui.

As a hydrogeologist with the EPA Groundwater Protection Section, Matt worked with provisions of the Safe Drinking Water Act and NEPA to prevent drinking water contamination. Specific activities included the following:

- Received an EPA Bronze Medal for his contribution to the development of national guidance for the protection of drinking water.
- Managed the Sole Source Aquifer Program and protected the drinking water of two communities through designation under the Safe Drinking Water Act. He prepared geologic reports, conducted public hearings, and responded to public comments from residents who were very concerned about the impact of designation.

- Reviewed a number of Environmental Impact Statements for planned major developments, including large hazardous and solid waste disposal facilities, mine reclamation, and water transfer.

Matt served as a hydrogeologist with the RCRA Hazardous Waste program. Duties were as follows:

- Supervised the hydrogeologic investigation of hazardous waste sites to determine compliance with Subtitle C requirements.
- Reviewed and wrote "part B" permits for the disposal of hazardous waste.
- Conducted RCRA Corrective Action investigations of waste sites and led inspections that formed the basis for significant enforcement actions that were developed in close coordination with U.S. EPA legal counsel.
- Wrote contract specifications and supervised contractor's investigations of waste sites.

With the National Park Service, Matt directed service-wide investigations of contaminant sources to prevent degradation of water quality, including the following tasks:

- Applied pertinent laws and regulations including CERCLA, RCRA, NEPA, NRDA, and the Clean Water Act to control military, mining, and landfill contaminants.
- Conducted watershed-scale investigations of contaminants at parks, including Yellowstone and Olympic National Park.
- Identified high-levels of perchlorate in soil adjacent to a national park in New Mexico and advised park superintendent on appropriate response actions under CERCLA.
- Served as a Park Service representative on the Interagency Perchlorate Steering Committee, a national workgroup.
- Developed a program to conduct environmental compliance audits of all National Parks while serving on a national workgroup.
- Co-authored two papers on the potential for water contamination from the operation of personal watercraft and snowmobiles, these papers serving as the basis for the development of nation-wide policy on the use of these vehicles in National Parks.
- Contributed to the Federal Multi-Agency Source Water Agreement under the Clean Water Action Plan.

Policy:

Served senior management as the Senior Science Policy Advisor with the U.S. Environmental Protection Agency, Region 9. Activities included the following:

- Advised the Regional Administrator and senior management on emerging issues such as the potential for the gasoline additive MTBE and ammonium perchlorate to contaminate drinking water supplies.
- Shaped EPA's national response to these threats by serving on workgroups and by contributing to guidance, including the Office of Research and Development publication, *Oxygenates in Water: Critical Information and Research Needs*.
- Improved the technical training of EPA's scientific and engineering staff.
- Earned an EPA Bronze Medal for representing the region's 300 scientists and engineers in negotiations with the Administrator and senior management to better integrate scientific principles into the policy-making process.
- Established national protocol for the peer review of scientific documents.

Geology:

With the U.S. Forest Service, Matt led investigations to determine hillslope stability of areas proposed for timber harvest in the central Oregon Coast Range. Specific activities were as follows:

- Mapped geology in the field, and used aerial photographic interpretation and mathematical models to determine slope stability.
- Coordinated his research with community members who were concerned with natural resource protection.
- Characterized the geology of an aquifer that serves as the sole source of drinking water for the city of Medford, Oregon.

As a consultant with Dames and Moore, Matt led geologic investigations of two contaminated sites (later listed on the Superfund NPL) in the Portland, Oregon, area and a large hazardous waste site in eastern Oregon. Duties included the following:

- Supervised year-long effort for soil and groundwater sampling.
- Conducted aquifer tests.
- Investigated active faults beneath sites proposed for hazardous waste disposal.

Teaching:

From 1990 to 1998, Matt taught at least one course per semester at the community college and university levels:

- At San Francisco State University, held an adjunct faculty position and taught courses in environmental geology, oceanography (lab and lecture), hydrogeology, and groundwater contamination.
- Served as a committee member for graduate and undergraduate students.
- Taught courses in environmental geology and oceanography at the College of Marin.

Matt taught physical geology (lecture and lab and introductory geology at Golden West College in Huntington Beach, California from 2010 to 2014.

Invited Testimony, Reports, Papers and Presentations:

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Presentation to the Public Environmental Law Conference, Eugene, Oregon.

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Invited presentation to U.S. EPA Region 9, San Francisco, California.

Hagemann, M.F., 2005. Use of Electronic Databases in Environmental Regulation, Policy Making and Public Participation. Brownfields 2005, Denver, Colorado.

Hagemann, M.F., 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in Nevada and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Las Vegas, NV (served on conference organizing committee).

Hagemann, M.F., 2004. Invited testimony to a California Senate committee hearing on air toxins at schools in Southern California, Los Angeles.

Brown, A., Farrow, J., Gray, A. and **Hagemann, M.**, 2004. An Estimate of Costs to Address MTBE Releases from Underground Storage Tanks and the Resulting Impact to Drinking Water Wells. Presentation to the Ground Water and Environmental Law Conference, National Groundwater Association.

Hagemann, M.F., 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in Arizona and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Phoenix, AZ (served on conference organizing committee).

Subject: Planning Commission - 9/13/21 Public Hearing - Public Comments Housing Element Update EIR

Thank you for the opportunity to submit comments on the draft Environmental Impact Report (EIR) for the 2021-2029 Housing Element Update.

With regard to wildfire risk, the EIR analysis should address the following:

“Hazard” is based on the physical conditions that give a likelihood that an area will burn over a 30 to 50-year period without considering modifications such as fuel reduction efforts.

“Risk” is the potential damage a fire can do to the area under existing conditions.

Homes and structures are fuel.

The Fire Hazard Severity Zones identify fire hazard, not fire risk. It’s an important distinction. More buildings add to available fuel. Once the buildings are in place the increased risk will exist for as long as they exist. It has a long-term impact on increased fire risk that is not reduced to less than significant for all residents.

While new construction will be built to code, many existing homes on the west side of Calabasas were built before any of the benefits that might be derived from new building codes were in place. Some of those older homes burned in the Woolsey Fire. The cost of “fire hardening” older homes must be borne by the homeowner.

To address wildfire risk and to ignore reality with regard to the ineffectiveness and inadequacy of the City’s emergency evacuation plan is a deficiency. The Woolsey Fire emergency evacuation left many residents trapped due to the closure of the 101 freeways, their designated evacuation route.

Emergency evacuation can happen at any time. Public transit service is not robust or frequent in Calabasas. It’s not a viable solution for emergency evacuation and won’t reduce traffic volume on emergency evacuation routes from future developments.

A privately owned vehicle is the more likely means of emergency evacuation for Calabasas residents.

While plans have been put in place in accordance with requirements, the problem of limited egress that relies on routes that are often impacted in wildfires remains unsolved. There is no opportunity to build new roads.

People are often the ignition source of urban wildfires. Increased population and traffic in areas reliant on limited egress routes will be a significant fire risk impact of the 2021-2029 Housing Element Update because there is no feasible mitigation.

The EIR should be revised to reflect this reality.

Thank you for your consideration of the above.

City of Calabasas
Planning Commission
100 Civic Center Way
Calabasas, CA. 91302

Dear Planning Commissioners:

Thank you for the opportunity to comment on our city's Housing Element.

I understand the need for housing in California, but I believe that our state legislation, with its cookie-cutter push for growth at any expense, has not caught up with the "real world" circumstances that some California cities must contend with.

City leaders, staff and most residents realize that all of Calabasas is in a Very High Fire Hazard Severity Zone. We may not have to contend with a Woolsey-type fire every year, but it's a matter of "when", not "if" another fire threatens our city. Development, whether new or infill, in certain parts of Calabasas must be realistically weighed against the eventual need for emergency evacuation.

The Malibu Canyon area has very limited ingress and egress. Some basic facts appear to be ignored in the DEIR's Wildfire Analysis. Historically, in the event of a fire, Las Virgenes Road becomes gridlocked. We've had the 101 shut down in both directions during fires. Mureau Road is not necessarily a viable, safe alternative in a fire. The number of residential units north of Mureau Road that rely on Las Virgenes Road is about 1,900. This doesn't include parts of Mountain View Estates that might try to evacuate via Las Virgenes. Using the City's average household size of 2.8, that means about 5,400 residents would have to evacuate Malibu Canyon. Being mindful of density is not a NIMBY issue; it comes down to being able to safely evacuate residents. Organizations, such as Housing and Community Development, which push for increased density regardless of underlying issues are not from this area. They show a clear lack of understanding of the safety issue we face. They will not be the ones loading our cars with kids, animals and belongings, trying to evacuate the area in the next fire.

The Malibu Canyon tract is not the only part of Calabasas that faces similar issues. Las Virgenes Road is a lifeline to thousands of residents, including those in Monte Nido and Malibu. With the exception of a relatively small stretch in Calabasas, Las Virgenes Road is a two-lane road. It's a designated Disaster Route which means first responder vehicles will need access to one of those lanes. This makes Las Virgenes Road less than ideal for evacuation purposes; however, it is the safest or only choice for many people.

It's important to note that buildings which are constructed to code still burn; they are ignition-resistant, not ignition-proof. Residents of new/redeveloped buildings will still need to evacuate. Building to code is not mitigation for egress problems. We are deluding ourselves if we think that adding hundreds of people to an area will not impact evacuation. Having it be a "less than significant impact" is an impossibility when an evacuation problem *already exists*. The DEIR does not acknowledge the evacuation problems that have occurred historically. We are sticking

our heads in proverbial sand if we choose to ignore the problem. I'm very concerned that the end result will be that our General Plan will be approved based on a faulty premise that everything is "A-okay". Future development decisions will be based on this faulty premise solely because it's listed in the General Plan.

All that being said, the following comments should not be interpreted as a ringing endorsement of the available choices. In my opinion, neither Alternative 2 nor Alternative 3 work. I believe there are other combinations of sites that could meet the housing goal.

The existing commercial site at the northwest corner of Las Virgenes Road and Thousand Oaks Boulevard (listed as part of Alternative 3) is currently being wasted; it's essentially a ghost mall. Despite the site being only a few years old, I believe it's ripe for redevelopment because it has remained mostly vacant since its completion. Redevelopment of that parcel would have minimal environmental damage. The impact to be concerned about is emergency evacuation, as noted above.

I am opposed to the inclusion of the commercial space at the southwest corner of Las Virgenes and Thousand Oaks in redevelopment plans (Village Market, Green Basil and Santa Fe restaurants, etc.). The DEIR describes the businesses there as "under-performing". I don't know what criteria have been used to determine that. While the strip mall is dated, these businesses appear to have managed to succeed for many years. Let's not mess with them; instead, they need to be supported.

One site that did not make it into either Alternative 2 or 3 is the Downtown Offices on Calabasas Road. These offices should be a priority because they make the most sense to convert. They're not located near open space or hillsides; they're on a 4-lane road close to the 101 (much easier evacuation) and lastly, it would take pressure off of the higher fire hazard areas such as those near Mulholland Highway or Las Virgenes Road.

Lastly, we have a glut of vacant commercial space in Calabasas. It makes no sense to require that additional commercial space be built. In the event existing commercial development is completely razed so it can be converted for residential use, I believe it should be rezoned to Multi-family Residential, not Mixed-Use. If only part of an existing commercial development is redeveloped for residential use (retaining part of the existing commercial development), only then should Mixed-Use zoning be used. Aside from this single example, I believe the City should explore a temporary, five-year moratorium on the Mixed-Use zone. The space used for the commercial component of Mixed-Use zoning would be better used for housing instead.

Thank you for considering my comments.

Best regards,
Frances Alet
